EASU Assist

Easy Assist[®]

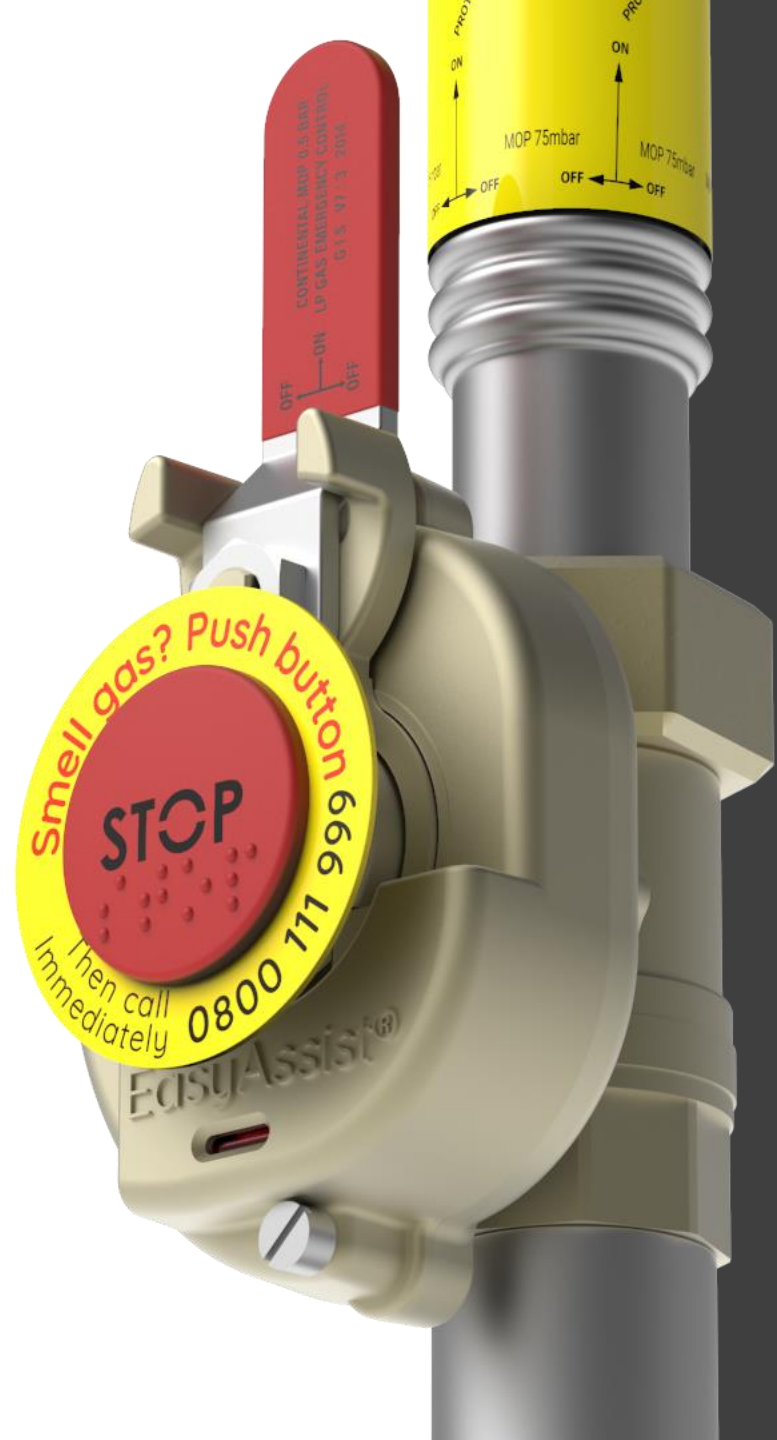

Several million people in the UK have physical disabilities or restricted mobility, and many more are unsure how to turn off the main gas supply to their home in an emergency. But in an uncontrolled gas situation, every second counts.

We have developed a safe and simple way to turn off a gas supply in the home, aimed in particular at helping those who require support due to their personal circumstances.

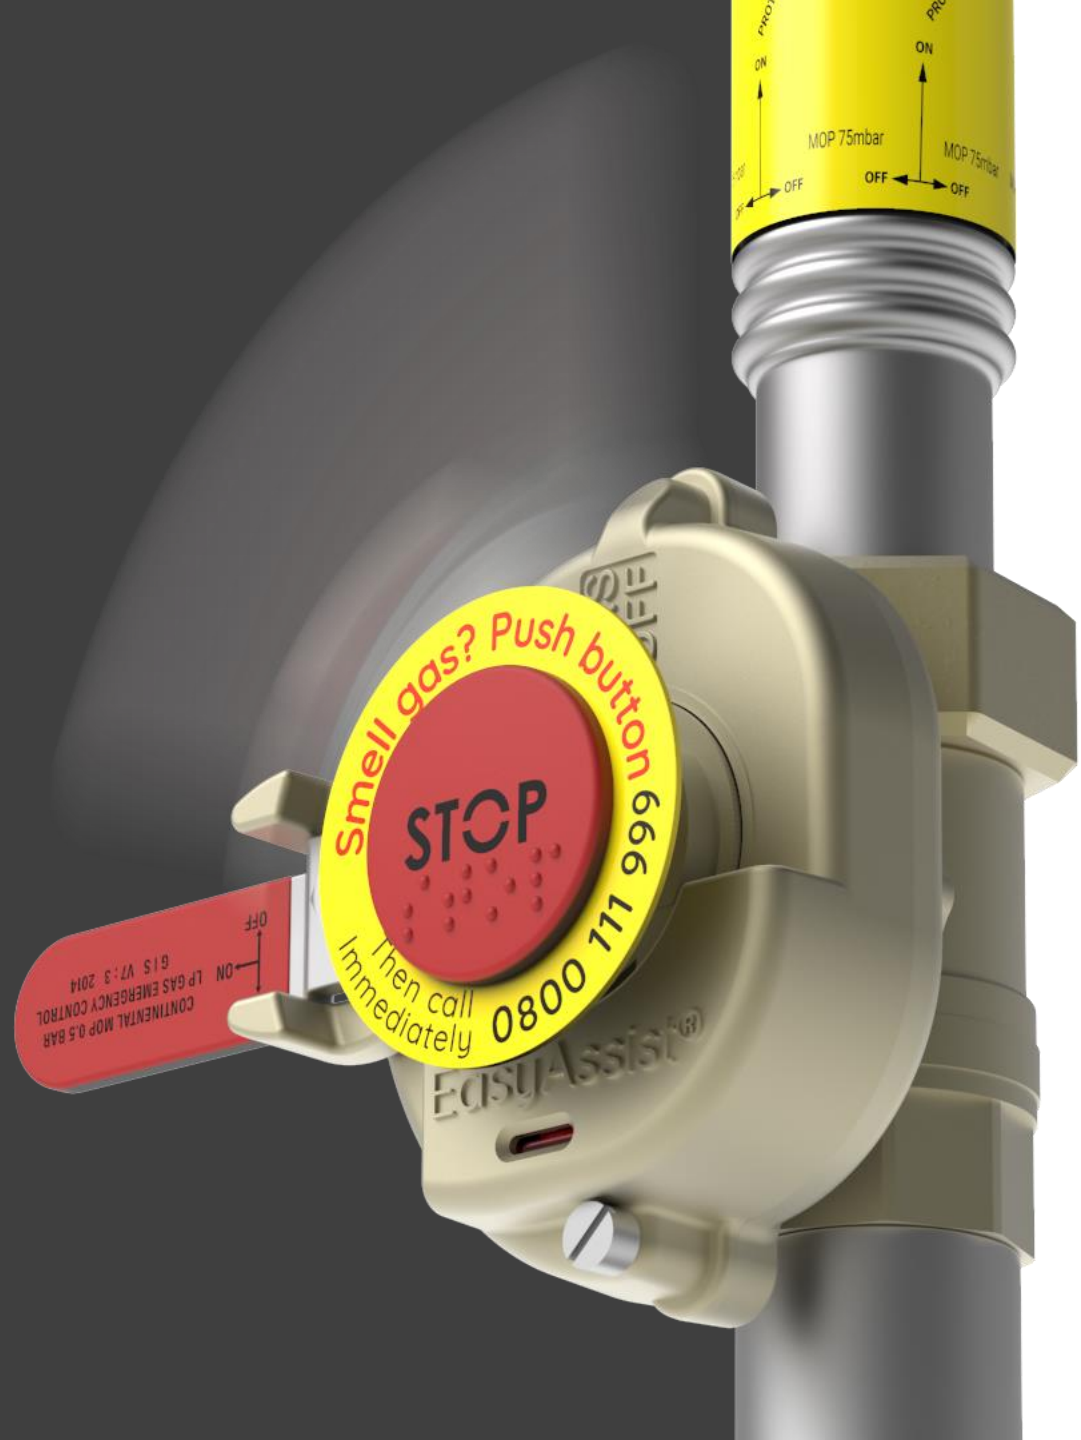

EasyAssist® is a 'clockwork' mechanism that fits directly onto the emergency control valve on a mains domestic gas pipe. It is designed to support customers in the event of a gas leak by enabling them to easily switch off the gas supply with the push of a button, while they wait for help to arrive. It can be installed by gas engineers in minutes and is a safe, cost-effective, technology-free solution.
