Transitioning faster to a deeply decarbonized energy system

As the world's leading resource of independent energy experts and technical advisors, we help industries and governments to navigate the many complex, interrelated transitions taking place globally and regionally in the energy industry. We are committed to realizing the goals of the Paris Agreement, and support our customers to transition faster to a deeply decarbonized energy system.

Through our advisory, monitoring, verification, and certification services, we provide assurance to the entire energy value chain - across generation and production, transmission and distribution, and end use. We support the operation of high-risk assets and systems, both physical and digital, in wind, solar PV, energy storage, hydrogen, oil, gas, synthetic fuels, power grids, and carbon capture and storage. Through our advanced technical expertise and regulatory understanding, we deliver unique insights and knowledge that help our customers to deliver energy in a safe and sustainable way.

Our collective deep and broad knowledge among 12,000 employees in DNV enables us to fulfill our purpose to safeguard life, property, and the environment. Our more than 4,000 dedicated experts working closely with our customers in energy make us the trusted partner to tackle the biggest global transformation in a generation: the energy transition.

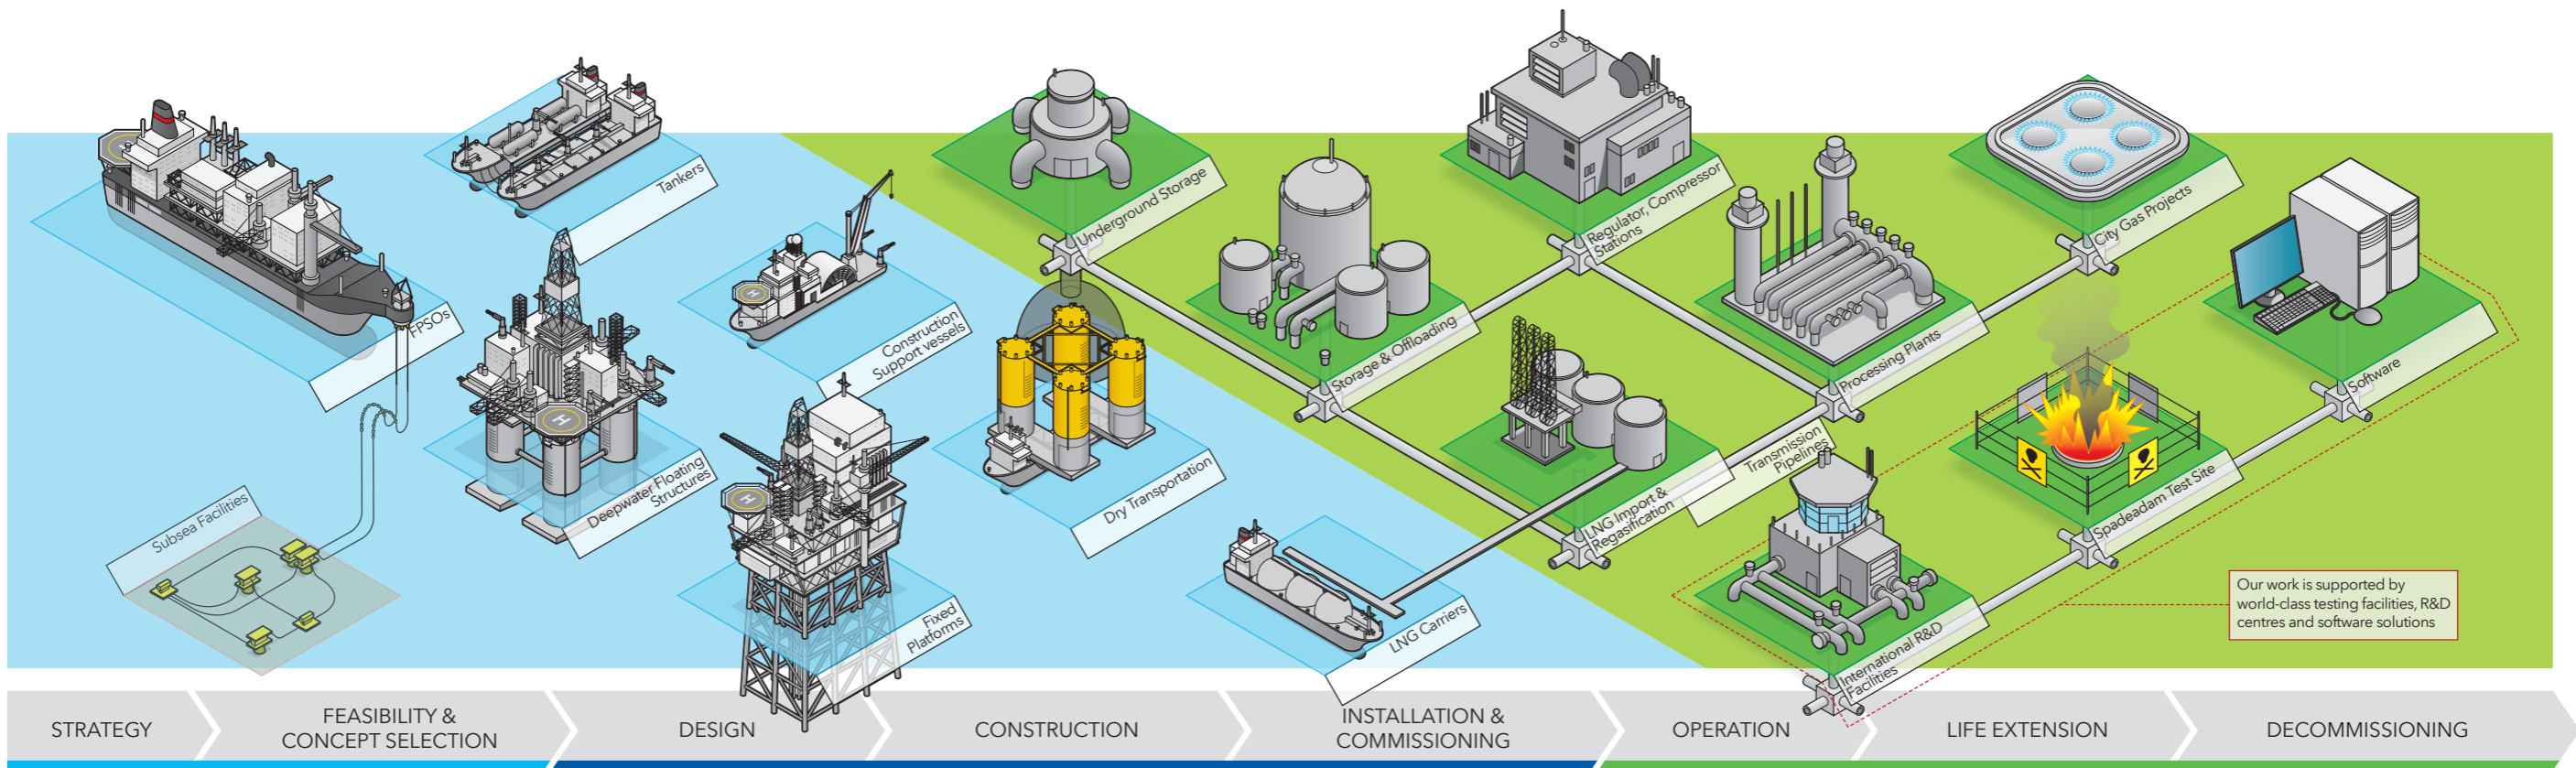

About DNV

DNV is a global quality assurance and risk management company. Driven by our purpose of safeguarding life, property and the environment, we enable our customers to advance the safety and sustainability of their business. Operating in more than 100 countries, our professionals are dedicated to helping customers in the maritime, oil & gas, power and renewables and other industries to make the world safer smarter and greener.

DNV is the technical advisor to the oil and gas industry. We bring a broader view to complex business and technology risks in global and local markets. Providing a neutral ground for industry cooperation, we create and share knowledge with our customers, setting standards for technology development and implementation.

THE TECHNICAL ADVISOR TO THE OIL AND GAS INDUSTRY

Our services at a glance

A TRUSTED PARTNER

From project initiation to decommissioning, DNV supports customers around the world in enhancing safety, increasing efficiency and managing risk in projects and operations. Combining more than 150 years of deep technical experience with industry-leading research into new technologies and our position as the industry's partner for setting standards, our global network of experts brings innovative solutions to our customers' challenges at every stage of the oil and gas value chain.

Verification and certification services

DNV supports customers in meeting compliance goals while reducing risk and improving cost efficiency. We cover the entire life cycle of an asset, including design assessment such as document review, independent analysis, and peer review workshops as well as surveys during fabrication, installation and commissioning, operation and decommissioning.

Inspection services

We ensure that assets and operations comply with the latest safety, performance, regulatory and quality assurance demands. Our vendor inspection services help customers to obtain the best results from specialized inspection, monitoring and testing while we deliver site inspection and testing both in person and remotely during the construction,

installation and commissioning of up, mid and downstream oil and gas facilities. Our in-service inspection services enable our customers to optimize maintenance schedules, meet regulatory requirements and avoid incidents.

Noble Denton marine services

Our Noble Denton marine services provide market-leading marine warranty and marine operation services to the offshore sector. We are recognized for setting and maintaining the sector's preferred standard for transportation, installation and decommissioning and site assessment. We also support customers assuring the readiness of marine operations, and we provide independent and impartial advice for vessel owners, operators, offshore contractors and underwriters.

Technical advisory

DNV offers technology qualification, concept studies, technical analysis and integrity services across the asset lifecycle. Our global experience and deep technical expertise help our customers to ensure projects and on-going operations are safe and fit for service, irrespective of scale, complexity or location.

Offshore classification

Our in-depth knowledge of the industry and its fast-evolving regulatory landscape enables us to offer the most efficient classification services in the industry. We provide dedicated technical support across the asset lifecycle to secure safe, reliable and high-performing mobile offshore units.

Risk management advisory

DNV works in partnership with customers to identify, assess and mitigate risk in projects and operations. Our team of HSE and risk experts extends to every major energy center in the world, and our investment in research and innovation ensures that our customers consistently receive world-class technical advice.

Digital solutions

We enable smart use of data and real time decision making by combining leading subject matter expertise with data analytics, information management and software. Our independent cyber security advisory services help to secure critical infrastructure and data. In partnership with our customers we are unlocking the value of data to predict tomorrow's technical challenges and enable faster, smarter decision making at every stage of the value chain.

Laboratories and test facilities

DNV operates some of the most important and progressive laboratories and test facilities in the industry. We offer the technologies and expertise needed to investigate and address our customers' most challenging technical needs. Laboratory services and solutions offered globally include failure analysis, materials testing, corrosion testing, large-scale structural testing, flow testing and flow calibration, full-scale explosion and blast testing.
