Annular Sealant for Dead Inserted Gas Services from the Garden Fitting to the Gas Main with PE Pipe. PolyFoam is a foam based annular sealant for dead service insertion of PE pipe.

The foam meets GIS/LC14 for Dead Service Insertion. The polymerized foam product is approved for use on inserted PE Pipe (not serviflex) services up to 2" diameter. The foam is injected from the garden fitting flowing back to the gas main.

The twin cartridge system allows full control of the application delivering a quick, easy and clean application. **No waste! Total control!**

APPROVED GIS LC14

**Clean | Quick | Easy**

## FEATURES

- Dispenser Gun
- Pre-assembled delivery line static mixed
- No premixing required

## FEATURES

- CO<sub>2</sub> FREE!
- **30:1 Expansion.**
- 100% Product - no propellant.
- Injection into the service head adaptor.
- Only one pipe access point required.
- Multiple cartridges can be used on the same application. Stable robust product.
- Sealed system with no separate mixing requirements.
- Suitable for insertion of up to 20 metres of length.
- Disposal in general waste.

## PIPE MATERIALS

- Ductile Iron
- Plastic
- P.E. (Polyethylene)
- Gas

## APPLICATIONS

- Gas
