The environmental and social landscape is changing

We'll help you understand the risks and impacts to your organisation and how to shape an ESG strategy that successfully evolves your business and demonstrates your responsibility and resilience.

Our approach

1

Every organisation will feel the **impact** of **climatic, societal** and **economic change** in different ways over **different** time periods.

2

Through an **evidence-based approach**, we help you **understand** the **physical** and **transitional risks** to your organisation, and in turn **your impacts** on **society** and the **environment**.

3

We'll **assess** what **long-term climatic change means** to your **investments, real estate, supply chain, customers, employees, insurance**, and ultimately your **reputation**.

4

By establishing this intelligence, together, we shape an **organisational approach to sustainability** that's right for your **business, stakeholders** and **communities**.

5

We'll help you **implement** it, and **report** against the various **mandatory** and **publicly** available **sustainability frameworks**.

6

Our **strength** is our **integrated sustainability, energy** and **engineering-led capability** which means we can **influence** your **approach** at **every step** in the face of an **ever-changing environmental landscape**.

Our ESG and sustainability services

1

Full Scope 1, 2 and 3 GHG emissions assessments

2

Materiality based assessments for Scope 3 emissions

3

Assessment of climate-based risks and impacts

4

Development of organisational and portfolio-wide net zero strategies

5

Establish and submit science-based targets to SBTi

6

Stakeholder engagement to create a social value strategy

7

Advice on green finance and access to funds and grants

8

Support in reporting against frameworks such as TCFD, TNFD, CDP, and CSRD

9

Implementation and ongoing measurement and verification of an ESG strategy
