## PHOTOGRAPHIC INKJET PAPERS

The award winning Olmec™ inkjet photographic range has been developed for use with aqueous dye and pigment inkjet printers. This range has long been the first choice of serious amateurs and professional photographers alike. Designed to give digital photographers everything they need to produce high quality inkjet prints. To ensure every photographer can find the perfect paper to match their work, there is a wide range of surfaces available.

Resin Coated (RC) papers offer a stable base for your images. The microporous coating on the RC papers in the Olmec™ range ensures that prints dry instantly and also provides water resistant properties. RC papers are capable of reproducing a wide colour gamut and, with an excellent d-max rating, they can easily reproduce the full tonal range of a black and white photograph. Available surface finishes

include gloss, satin and lustre as well as speciality photo papers with metallic and pearl finishes: these papers give added effects to your prints, great for printing an eye catching portfolio.

There is also a matte photo paper for photographers who prefer no reflections on the surface of their prints. For photographers who are considering expanding into offering fine art inkjet editions, fine art surfaces are available. Including a true barium sulphate base coated for inkjet printing, this replicates traditional fibre based silver-halide papers. The cotton base matte fine art paper with a subtle surface texture provides a luxurious feel to prints and is also archival quality.

The Olmec™ range is manufactured and distributed by Innova Art, a world leader in inkjet photographic media.
