

Olmec™

The award winning Olmec™ inkjet photographic range has been developed for use with aqueous dye and pigment inkjet printers. This range has long been the first choice of serious amateurs and professional photographers alike. Designed to give digital photographers everything they need to start producing high quality inkjet prints, the range includes some of the most popular surfaces for photographic printmaking.

Resin Coated (RC) papers offer a stable base for your images. The microporous coating on the RC papers in the Olmec™ range ensures that prints dry instantly and also provides water resistant properties. RC papers are capable of reproducing a wide colour gamut and, with an excellent d-max

rating, they can easily reproduce the full tonal range of a black and white photograph.

Available surface finishes in the Olmec™ range include gloss, satin and lustre as well as speciality photo papers with metallic, pearl and matte finishes. These papers give alternative effects to your prints: great for printing an eye catching portfolio.

The Olmec™ range is manufactured and distributed by Innova Art, a world leader in inkjet photographic media.

Lightweight Photo Papers

Photo Gloss Lightweight
OLM-062

- 190gsm
- Resin Coated Inkjet Photo Paper
- Water Resistant Microporous Coating
