

Easiframe® Curved Instructions

Australian Patent Granted 2020:
2020100590

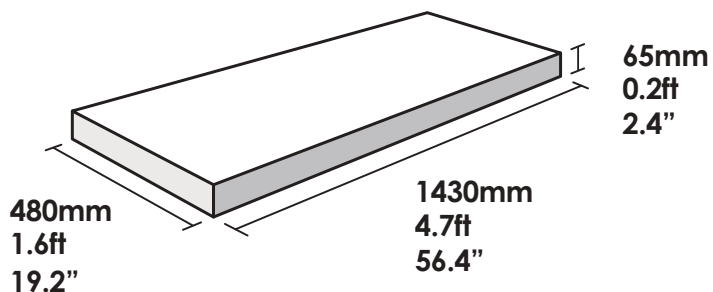

US Patent Pending:
16/911,319

UK Patent Pending:
2009816.6

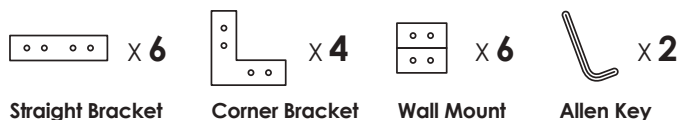

Canadian Patent Pending:
3,085,076

Packaging

Dimensions:

Contents

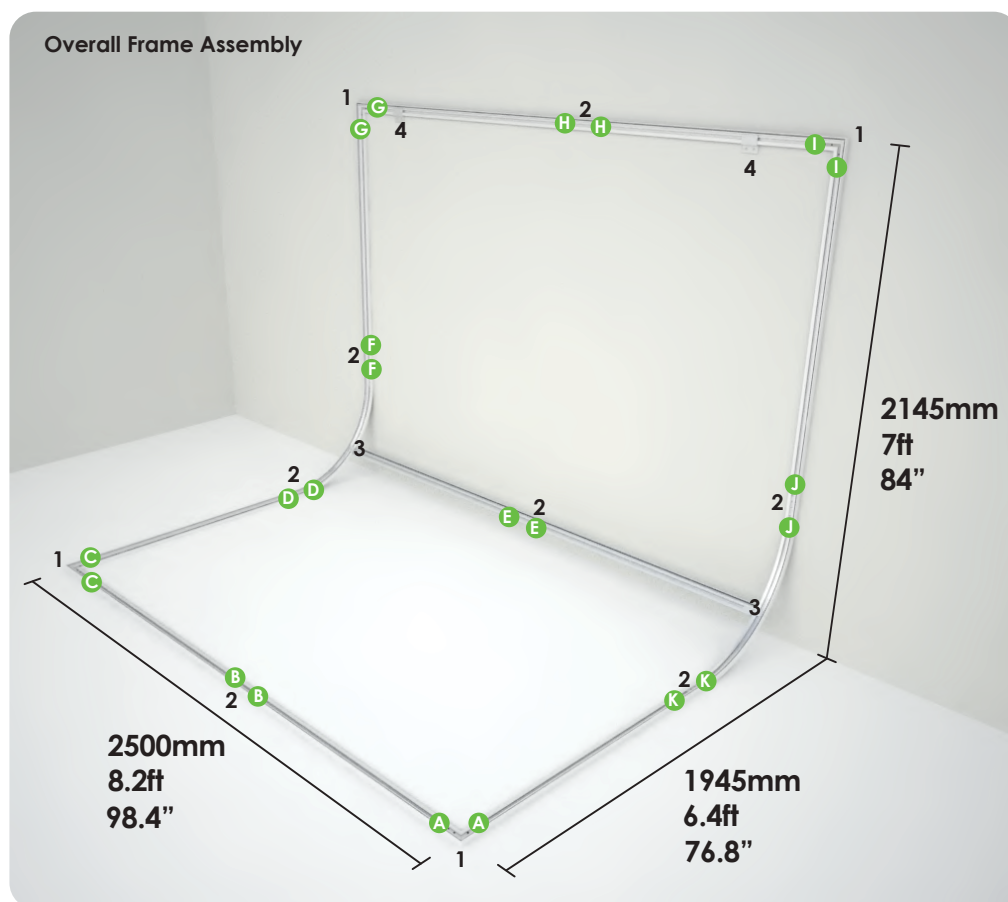

Weight:

Easiframe Curved: 10kg / 22lbs

Fabric Skin: 5kg / 11lbs

Total: 15kg / 33lbs

Frame Assembly

The **Easiframe® Curved** is labelled on each joint with a green dot. Please ensure that the same labels are connected (**A + A - B + B etc.**)

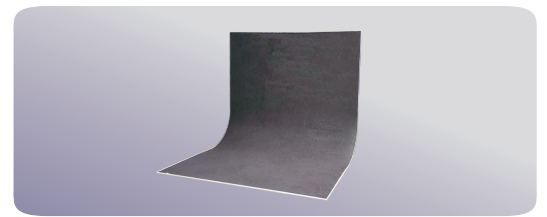

All joints require an Allen Key to tighten which is supplied.

Please Note: Green dot labels are stuck to the **BACK** of the frame. Once in place, frame pieces will need to be **TURNED OVER** to connect the joints.

Easiframe® Curved Instructions

Fabric Insert

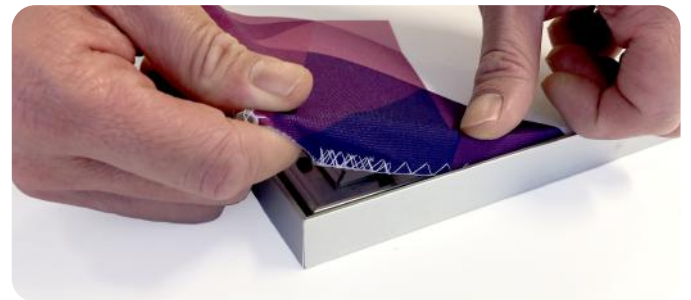

To install the fabric skin correctly, start by inserting the fabric's silicone edge into the top two corners, then into the middle and finish the remaining section of the top.

Repeat the same process for the bottom section and then the sides.

Please refer to the diagram - Starting from '1'

Insert silicone edge into the frame sewn side down. When inserted correctly, you should not be able to see the sewing.
