

ABOUT US

HORIZON
AGRICULTURE

OVERVIEW

Sly Agri was founded 14 years ago by a farmer, Agronomist and former Director of Sly France – George Sly.

The company was built on historical family ties with agricultural equipment and engineering practices. The 300 hectare Sly family farm in South Lincolnshire (UK), is at the heart of our product development process.

In 2019, Sly Agri was rebranded as Horizon Agriculture, the future focus of which, would be the production of innovative agricultural machinery that would facilitate regenerative and conservation-friendly farming.

With the help of Innovate UK and investment from Local Government, we have been able to develop the manufacturing process that is integral to our business. This includes the construction of a purpose-built, semi-automatic blasting and coating facility and 4-bay assembly hall.

ABOUT US

OUR VISION

Our vision begins with the soil and our commitment to design and manufacture innovative products that promotes soil regeneration, whilst also helping our customers to improve productivity, yield and profitability.

OUR PROMISE

Our soils are degrading at an alarming rate. We recognise that to sustain our soils, farmers require quality, reliable machinery and components that address agronomic issues and at the same time increase efficiency and productivity.

Our promise is to imagine, develop and manufacture innovative machines and components that challenge perceptions, improve efficiency, productivity and make a real difference to the environment.
