

An aerial photograph of a rural farm. In the foreground, a yellow tractor is working in a large green field, leaving distinct tracks. The field is divided into rows. In the background, there are rolling green hills, a cluster of farm buildings including a barn and a house, and a dense line of trees. The sky is clear and blue.

# Complete Carbon Auditing

We do the paperwork.

*You go farming*

Expert help and advice on all aspects of carbon auditing your farm, from data collection and inputting, right through to calculating your carbon footprint, complete with benchmark data.

**CXCS** 

**More and more pressure is being applied to farmers to take control of their carbon emissions and meet net zero targets. With carbon auditing expected to form a major part of agriculture policy, it is going to become increasingly important for farmers to demonstrate how action is being taken to reduce emissions and increase carbon sequestration.**

## Our services:

---

To meet the NFU's ambitious goal of reaching net zero across the whole of agriculture in England and Wales by 2040, farmers need to be aware of their contribution to the industry's carbon footprint.

The carbon footprint of a farm is calculated by carrying out a carbon audit. This can also be used to identify which aspects of a farm are emitting the highest levels of emissions, and to highlight areas where operational efficiency can be improved.

Farms with low carbon footprints are often the most efficient and profitable. A carbon audit can also make a supplier more appealing to buyers focused on sustainability and is soon to become a requirement of higher-level farm assurance schemes such as LEAF.

### **How We Can Help**

We provide two package options to suit all agricultural businesses and budgets:

#### **Carbon Calculation Only**

A straightforward calculation of your carbon footprint including data to illustrate your current carbon emissions.

#### **Full Carbon Audit**

A full audit of your enterprises including:

- Current carbon emissions calculation
- Benchmark data relevant to your business
- Recommendations on how to improve your carbon footprint
- Advice on how to sequester more carbon
