Who we are What we do

A UK leader in energy efficiency

InstaGroup has delivered energy saving solutions and acoustic systems across the UK for over 40 years.

We're recognised for our experience as a leading installer for insulation, solar, acoustics and flooring in homes and businesses. Contractors and installers trust us for reliable, high-quality material supply, and we are an approved system designer for wall insulation, acoustic solutions, underfloor heating and solar.

National experience, local knowledge

Through our national network of approved installers we can offer a full range of energy efficiency measures to improve domestic and commercial buildings. This includes upgrading social housing stock through various government-backed or energy company funding schemes.

Delivering on decarbonisation programmes

Social Housing providers, Local Authorities and Housing Associations depend on our knowledge in accessing funding and managing funded projects. Programmes all over the UK are supported by InstaGroup's technical team and our PAS2035 retrofit design and co-ordination service.

Large-scale operations

We work with the construction industry to install acoustic systems and underfloor heating on new residential developments and major renovations, and we supply our high-performing flooring all over the world.

Building a better future

We are a modern, diverse company driven by a dedicated and motivated team. We believe in equal opportunities and embrace the principles of Investors in People.

We're committed to Net Zero, and we invest in and develop sustainable solutions that save energy and cut CO₂ emissions.

InstaGroup is a privately owned company. Our head office is in Berkshire.

Installing energy efficiency in buildings

InstaGroup install External Wall insulation, Cavity Wall insulation, Loft insulation, solar PV and heating systems for homes and businesses. We work with local councils to retrofit and upgrade social and rented housing.

We operate the longest running and largest network of installers in the UK, providing high quality workmanship alongside market-leading products.

Innovations to save energy and cut bills

We're leaders in energy-saving technology. Our insulation system InstaClad has achieved Innovation status, with a 25% uplift in funding for ECO4 and The Great British Insulation Scheme. This uplift means social housing with an EPC rating of D is eligible for InstaClad under ECO4 funding.

InstaGen, our fully-integrated solar PV system, makes us one of the first to offer a seamless solution of panels, energy storage batteries and inverters. Design and installation is smarter and simpler.

Our professional installation service includes no-obligation home energy surveys and conscientious aftercare.

Material Supply, funding and PAS 2035

We manage and provide funding and grants on behalf of our clients and customers and have delivered on schemes such as the Energy Company Obligation (ECO) for over 20 years.

We offer a complete retrofit co-ordination and design service that is PAS 2035 compliant, plus experienced project management for funded works.

Material supply and installer support

InstaGroup's approved installer network is supplied with our industry-leading systems and materials including InstaClad, InstaFibre and InstaGen solar PV.

Installers can rely on our experienced team for material supply and specification, skilled system design, guidance on installation and dedicated technical support. Our national technical team ensures the quality of installations and the delivery of projects in a timely manner.

We streamline funded installations across the network through our InstaPAS retrofit co-ordination service. InstaGroup's qualified retrofit co-ordinators are available to check and sign-off works under funding schemes such as GBIS, ECO, HUG and SHDF.

“ Their team is efficient and their knowledge of the industry is invaluable. Customers regularly comment on the high quality of the installation and the level of service provided to them. ”

Rebecca Venn, Energy Efficiency Project Manager, Action Surrey

Acoustic systems and underfloor heating

25 years of technical excellence has made InstaGroup the preferred partner for major new build and regeneration projects, including the extensive redevelopment of London's Elephant Park and iconic Battersea Power Station.

Our high-performing systems include acoustic flooring with underfloor heating, acoustic ceilings and acoustic walls. Our patented cradle and batten acoustic floors are proven to save build time, cut carbon and reduce water waste in construction.

We use sustainable and recycled materials to manufacture our products, preventing tons of landfill every year.

“InstaGroup kept to their promise of install rate. There was a great ‘no excuse’ attitude to get the job done, and InstaGroup set a pace and benchmark for others to follow.”

Guto Jones, Project Director, Mace

“ InstaGroup gave us great confidence that they consider everything they need to at tender stage and are then able to deliver it as they planned to. We’ve developed a great relationship with InstaGroup and look forward to working with them again. ”

Max Becker, Senior Building Services Manager at Lendlease Residential

Flooring fit for the future

We're known worldwide for our quality commercial flooring.

We supply specialised floor systems for gyms, sports and leisure facilities, dance studios, weight rooms and more.

Our innovations in flooring include eco-friendly self-adhesive acoustic underlays and the magnetic system Ezy-Install, which offers a quick and clean installation while reducing flooring waste. Our durable and versatile gym flooring system ISO-Flex has been developed to meet the varying demands of different fitness zones within gyms and exercise areas.

All of our sustainable flooring solutions are made from recycled materials which are themselves re-usable and recyclable. A range of attractive floor finishes means that our systems deliver great results both visually and acoustically.

“ DYNAMIK is working in close collaboration with InstaGroup to develop the ISO-Flex range of acoustic gym flooring systems. These have been tested to the latest industry requirements for both acoustic performance and free weights impact resistance, and the results provide ‘Real World’ data for both consultants and architects. ”
