

**Unlocking the Next Generation of Ingredients  
with Industrial-Scale Supercritical CO<sub>2</sub>**

What if every molecule had value?

150,000  
Tons

20%

60,000  
Tons

Hydroxytyrosol

Squalene

Oleuropein

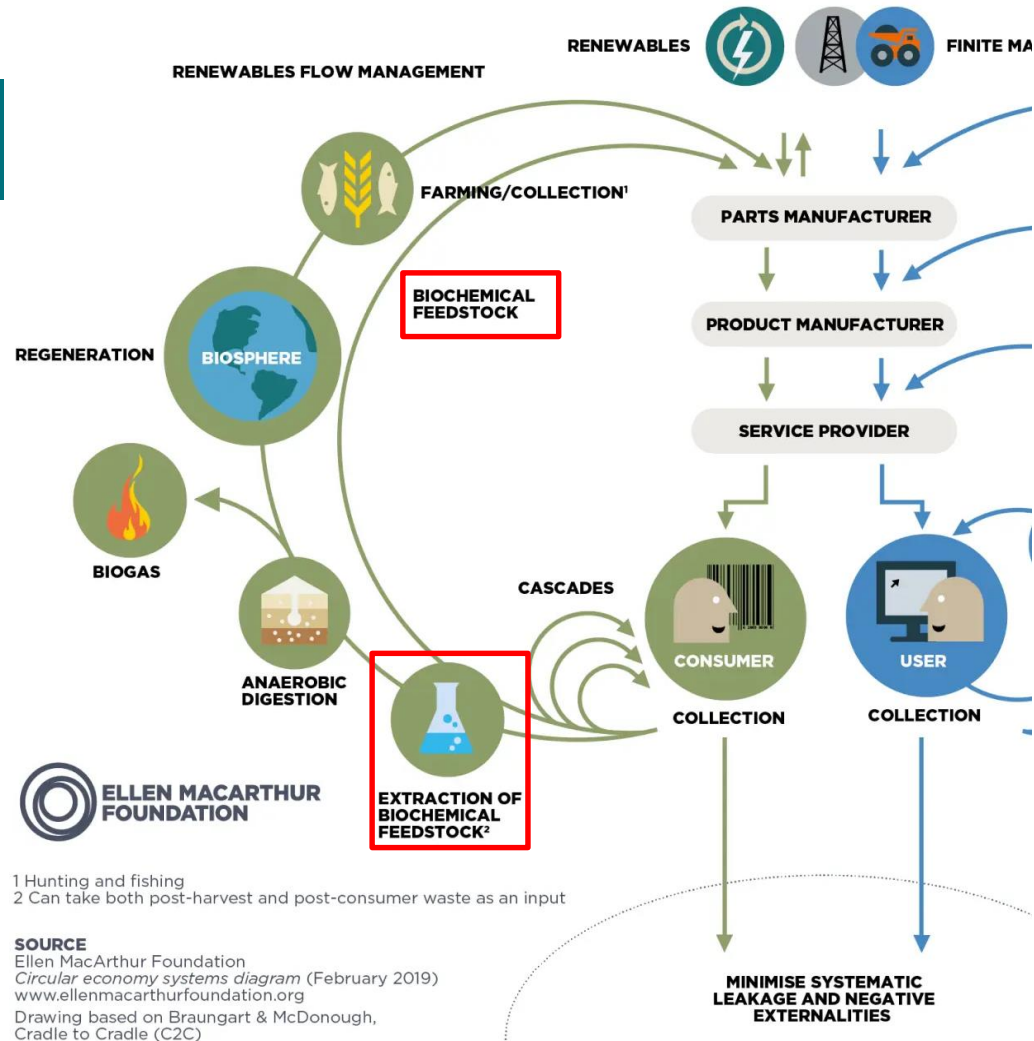

# Circular Economy

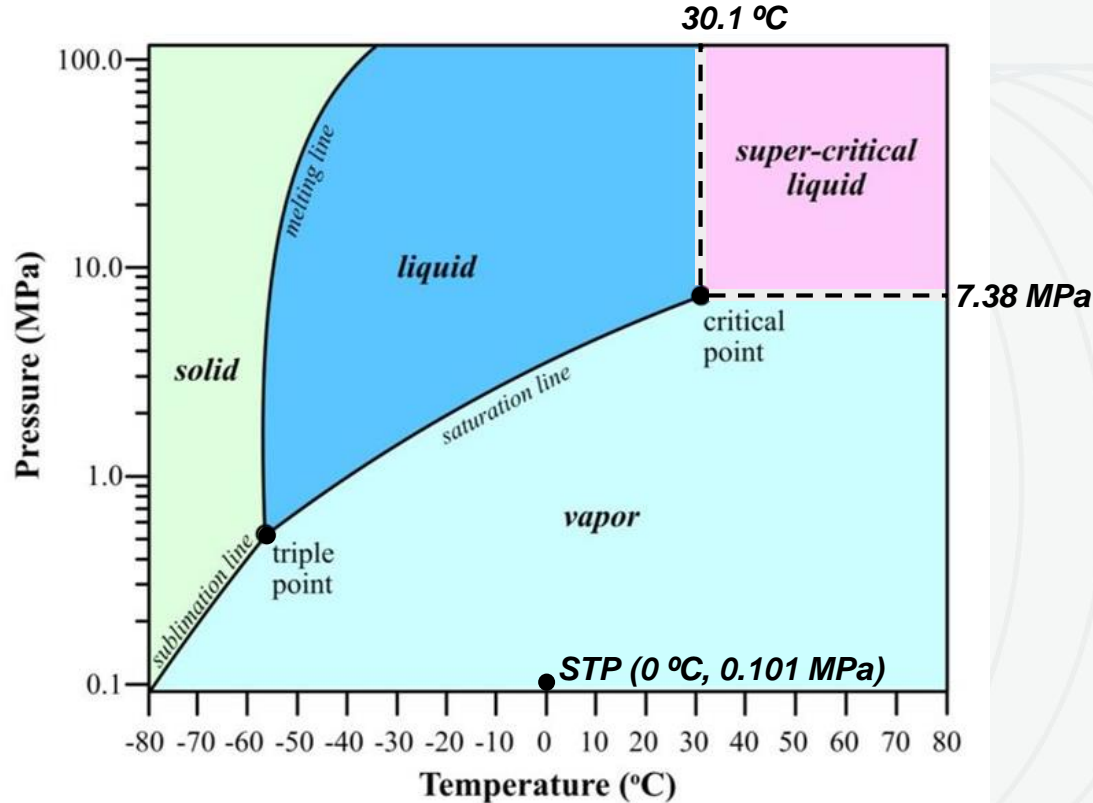

Eliminate waste and pollution

Circulate products and materials at their highest value

Regenerate nature

# Supercritical CO<sub>2</sub>?

## WHAT IS IT?

Beyond a solid, liquid, or gas. A state that exhibits gas-like diffusivity and liquid-like solvent power.

## WHAT CAN IT DO?

Penetrates cells to supersaturate them with high-energy CO<sub>2</sub>.

Lifts and carries non-polar and slightly-polar molecules from biomass.

Releases molecules as the energy drops

Extracted compounds and the processed biomass are sterilized.

**“...a major breakthrough in green extraction tech, making the traditional process exponentially better.”**

*—Chris Gallagher, Contributor, USA Today*

**SCO2**

## Ingredient Discovery

Ingredients that have been inaccessible or not economically viable are now possible.

What is your goal – health, flavor, texture, color, performance, or all of the above?

## Compound Purity

Compound extraction with precision – repeatable, rapid supercritical extraction and fractionation in one-step.

## Value Recovery

In a circular economy, every molecule has value. Wasting bio-resources is a missed opportunity to grow your business and keep it sustainable.

# AUTOMATED EXTRACTION & FRACTIONATION

# Supercritical Reinvented

(12) **United States Patent**  
Fuchs et al.

(10) Patent No.: **US 11,376,522 B2**  
(45) Date of Patent: **Jul. 5, 2022**

# Piloting at Scale

SCO<sub>2</sub> FACILITY, LITTLE CANADA, MN

SCO<sub>2</sub>

# Industrial: Cleaner and Smarter

## Traditional scCO<sub>2</sub> Extraction

*No major breakthrough in 50 years*

### Small/Boutique Applications

Size: benchtop up to 2 tons per day

### Pre-processing required

Grinding & bagging

### Slow extraction times

40 minutes - 16 hours

### Many downstream steps

To achieve target fractions

### Manual, multi-step, time-consuming process

Does not scale cost-effectively

## NEXTRACT TECHNOLOGY

*Supercritical Extraction Reinvented*

### Industrial Scale

Size: 1-25 tons per hour

### No pre-processing

Direct feed of biomass

### Rapid extraction

Less than 15 minutes

### No downstream steps required

Fractionate in one step

### Automated end-to-end process

Designed to scale cost-effectively

# Platform Model, Rapid ROI

**Reduce**
