- DevOps
- Smart Content

MAYOR'S INTERNATIONAL  
BUSINESS PROGRAMME

# What is NeuerEnergy?

NeuerEnergy is an end-to-end, cloud-based platform designed to guide you to net-zero more quickly, smoothly, and cheaply.

*“The most comprehensive net-zero platform we’ve seen.”* **Phil Cole, WindEurope**

## A single end-to-end system

User-friendly dashboards help you keep track of global CO2e reductions, monitor ESG goals, perform cost-benefit analysis, compare mitigation solutions, and effortlessly manage both internal and external legal and reporting workflows.

---

## Analyse Plan Procure Manage

---

- Unbiased analysis of CO2 mitigation options
- Total cost and potential savings management (incl. cash flow and risk management)
- Transparent and compliant reporting

# The challenges to net-zero

## Risk, cost & complexities

- Impending regulations and fines for non-compliance.
- Science-based approach to measuring carbon footprint is complex.
- A net-zero strategy and roadmap is time consuming and expensive.
- Cost-benefit analysis of CO2 mitigation options, technologies and procurement is confusing.
- Internal resources and external support represent significant costs.
- Transparent reporting across the supply chain is challenging.

# Example: How NeuerEnergy transforms energy purchase

## Faster

**3x faster**

NeuerEnergy streamlines renewable energy purchases to save you weeks of tedious marketplace analysis.

By standardising the energy acquisition process across multiple generators, you can reduce the time to gain buy-in and sign contracts **by 67-74%**.

## Smoother

**Improve and streamline processes**

Unify side-by-side energy mix comparisons, AI-enhanced risk analysis, and cost-effective supplier grouping.

Workflow management makes it more straightforward to build consensus and ease negotiation processes.

## Cheaper

**Save up to 23%\***

Control your future energy supply security and spend with minimum additional effort – all while supporting renewable energy initiatives.

\*23% avg PPA rate vs commodity rate. <https://www.gov.uk/government/collections/industrial-energy-prices>

# You can analyse the benefit of different technology options

## Technologies

[VIEW SUMMARY >](#)

# Net-zero. Complete control.

## Net-zero journey success

- **Baseline** your existing Scope 1, 2 & 3 emissions by onboarding and unifying data from all your sites, wherever they are.
- **Measure the potential impact** of different CO2 targets, timelines and mitigating technologies to select the optimal pathway.
- **Build internal consensus** using our role-based view and flexible approval flow.

## Procure & Manage in one place

- **Choose** one or multiple generators to match your shape, volume, price and location requirements to for renewable energy.
- **Control** contract negotiation flow with automated risk scoring for key contractual elements.

## More value. Less risk.

- **Reduce the cost of capital and increase shareholder value** by establishing a net-zero roadmap that complies with ESG investment standards.
- **Bring suppliers onboard** to address Scope 3 emissions and decarbonise your supply chain.
- **Manage existing and new contracts** in one place with an overview of settlements, risks, and required actions.

# Use case

Pressures from Government Regulations, Branding concerns and Energy security & costs are the key drivers in the market. The software is flexible and persona-centric to allow any user from Finance, ESG/Sustainability and Energy Procurement roles to collaborate on projects and gain buy-in from within their organisations.

## Major Sportswear Brand

“Building a carbon neutrality roadmap is difficult when you have global footprint, Building internal consensus is very difficult.”

## Car Manufacturer

“Very important the transparency of certificates, we need an End-to-End solution.”

## Multi-National Bank

“We do not know where all our information is and are unaware of the carbon neutrality related calculations.”

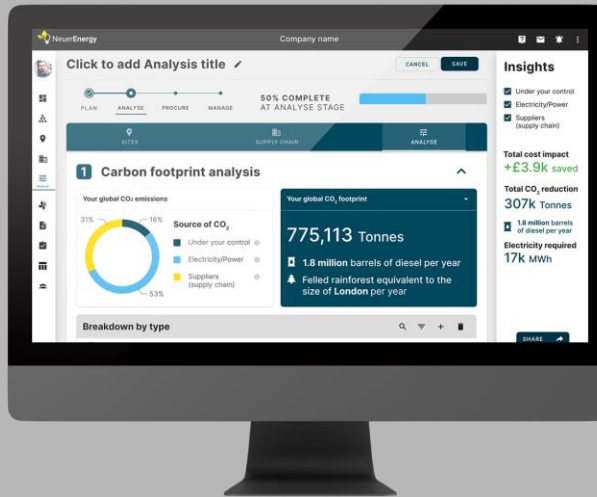

# Sustainability. Democratised.

The NeuerEnergy API unifies intelligence and data usually kept in functional silos, including any existing PPAs, REGOs and/or iRECs, to streamline and simplify the end-to-end net-zero journey.

It's a low-cost subscription model that democratises net-zero for small and medium entities.
