# SmartViz®

AI-powered Building Analytics

SmartViz is an AI-powered building analytics software that empowers leaders with insights to save space utilisation and energy efficiency, while enhancing occupant wellbeing, productivity and the journey towards net zero.

With SmartViz you can:
- Aggregate data from multiple sources into a visual, interactive "digital twin"
- Visualise space utilisation, air quality and energy performance
- Integrate low-cost IoT sensors to enhance user productivity and wellbeing
- Scenario plan and optimise buildings to reduce space & energy costs
- Establish a data-driven, people-centred estate planning strategy

SmartViz is a result of 20 years of experience in optimising buildings – including workplaces, universities, schools, museums, airports and more. We have saved Vodafone $40m per annum, and saved Cardiff Met University £5.1m by optimising space and energy management.

Contact us for a demo on how we can help you work smarter, improve productivity and save costs.

SmartViz offers:
- occupancy monitoring and space management
- energy management
- air quality monitoring and management
- people movement and asset tracking
- IoT sensors and BMS integrations for smart buildings
- digital twins for buildings and campuses
