For Net Zero and beyond.

## From Intent To Assured Delivery.

Energy programmes succeed when responsibility is clear, decisions are evidence-led, and delivery is shaped around real operational constraints.

Too often, strategies stall between assessment and implementation – fragmented supply chains, disconnected advisors, and unclear ownership create risk, delay and dilution of outcomes.

OCS Energy Services provides a single, structured route from intent to delivery. By combining technical assurance, commercial clarity and self-delivery capability, we reduce fragmentation and maintain continuity across complex estates and infrastructure.

### Delivered through six integrated capabilities:

#### Energy Management & Performance Optimisation

Data-led insight improving efficiency, control and outcomes.

#### Mechanical & Electrical Assets O&M & Retrofit

Lifecycle management that delivers performance, efficiency and decarbonisation.

#### Renewables & Low-Carbon Generation

Practical generation solutions that reduce carbon emissions.

#### Utilities & Energy Infrastructure

Reliable delivery across complex utility and energy networks.

#### HV Asset & Infrastructure Maintenance

Safe, compliant operation of high-voltage energy assets.

#### Battery Energy Storage Systems (BESS)

Resilient storage supporting performance and energy security.

## Full-lifecycle delivery for Net Zero and beyond.

Customers across estates and infrastructure face increasing pressure to decarbonise, control costs, meet compliance requirements and upgrade ageing systems – all while maintaining continuity of service.

Funding constraints, regulatory deadlines and operational risk mean progress must be measurable, buildable and delivered with confidence.

OCS Energy Services supports this through a self-delivered, FM-embedded model covering the entire energy lifecycle. Customers work with one accountable partner – from early assessment through to long-term optimisation – with direct delivery across engineering, FM and high-risk infrastructure.

### This approach reflects OCS's Best Service Excellence approach, delivering:

- > **Best Practices:** compliant, accredited and technically assured work
- > **Best Productivity:** efficient, well-sequenced delivery that avoids duplication and delay
- > **Best Resilience:** operational stability, continuity and dependable performance
- > **Best Experience:** clear communication, visibility and confidence throughout delivery
- > **Best Outcomes:** carbon reduction, cost control and sustained performance improvement

**The focus is simple:** enabling safe, compliant, low-carbon estates and infrastructure – now and for the long term.

OCS | Energy Services™

## A single framework designed around your needs.

Energy programmes need structure, pace and clear accountability to move from intent into delivery.

OCS Energy Services applies a single, structured Five-Stage Energy Framework to guide customers from early assessment through to long-term optimisation. The framework brings clarity, accountability and momentum at every stage of the energy lifecycle.

Customers can engage at the stage that reflects their current level of readiness, with flexibility built in as needs evolve.

### The Five Stages:

- **Discover:** establishing a clear, evidence-based starting point
- **Design:** turning insight into a practical, fundable and buildable plan
- **Deliver:** executing safely and efficiently through a single accountable partner
- **Maintain:** protecting compliance, performance and asset value over time
- **Optimise:** extracting full system value through ongoing monitoring and improvement

The framework is underpinned by OCS's **Best Service Excellence** approach – ensuring safety, continuity, efficiency and measurable outcomes throughout the lifecycle.

OCS | Energy Services™

# Move from uncertainty to proven delivery.

Customers with complex estates or ambitious infrastructure plans often know what needs to happen. The challenge is turning intent into action – without losing control, momentum or accountability.

OCS Energy Services provides the structure, technical assurance and delivery capability to support progress at every stage of the energy lifecycle.
