

Accelerating fleet electrification at scale

A scaled fleet carbon emissions reduction solution for mission-critical fleets.

The future is electric

Fleets are at the heart of the energy transition, contributing 10% of the UK's total carbon emissions. There is increasing pressure to electrify, as well as significant business and reputational benefits to be unlocked through electrification.

CREATING OPPORTUNITIES FOR YOUR BUSINESS...

Improve your reputation with staff and customers as an electric-first business.

Right-size your fleet and reduce total cost of ownership (TCO).

QQ

Achieve your sustainability goals and contribute to a cleaner planet.

Access business opportunities and score

higher in tenders with an electric fleet.

WE HELP YOU OVERCOME THE CHALLENGES...

 \searrow

Navigating supply chain challenges as battery & vehicle demand grow.

Managing energy supply and price volatility.

Sourcing the right vehicles in time.

Meeting net-zero-time pressures to reduce carbon emissions for your fleet and business.

WHAT IS YOUR BUSINESS **DOING TO ACCELERATE** THE TRANSITION?

VEV are your partner for the full transition, designing and delivering scaled enterprise fleet solutions. We'll help you optimise your fleet, charging and operations to make the most of the transition, backed by deep experience delivering scaled turnkey charging solutions.

Deep connections into global energy markets

1.

of global energy volumes traded daily.

Investing heavily in the energy transition

invested in renewable energy.

e-mobility, energy,

A partner with a fresh perspective

We're 100% owned by Vitol, the largest independent energy trading company in the world.

A successful partner with deep heritage

annual revenue.

\$2.2bn

Already accelerating fleet transitions across LATAM

>400 buses

and >200150kw chargers, fully financed.

Experienced team

who can deliver at pace. Deep experience leading global businesses across infrastructure & advisory.

Delivering for the future not just for today

- Renewable energy generation.
- Multi-Fuel support: EV & H2.
- Optimisation services.

We build integrated solutions

we build tailored solutions to meet your fleets needs from our integrated ecosystem of hardware, infrastructure and services. VEV are one of the only providers who can deliver an integrated solution for your whole TCO, from chargers and power, to vehicles and finance, underpinned by our intelligent energy management platform.

Data-driven fleet assessment

Our tool turns your telematics data into actionable insights to create your fleet carbon reduction pathway, including vehicles, charging infrastructure. Our data-driven approach can help you:

- Identify cost and carbon savings for your business.
- Understand required chargers, electricity usage and grid demand needed to electrify your fleet.

All we'll need is a table with telematics data from your fleet.

insights across your fleet.

Illustrative example

Fleet data requirements

We use your fleet's telematic data to identify which of your vehicles are ready to be electrified, and make actionable recommendations around charging infrastructure to meet their requirements.

If you can provide the data below (we'll send a table) we'll create your optimised electrification pathway, with insights at a fleet or vehicle level.

OUR OUTPUTS

- ✓ % READY TO ELECTRIFY
- ✓ FUEL SAVINGS
- ✓ CARBON SAVINGS
- ✓ CHARGEPOINTS REQUIRED
- ✓ GRID UPGRADE REQUIRED

- ✓ ELECTRICITY DEMAND
- ✓ SMR SAVINGS
- ✓ TAX SAVINGS
- ✓ FLEET REPLACEMENT
- ✓ CHARGEPOINT SPEED
