

Achieve **net zero** carbon

Net zero carbon is an urgent and essential step in tackling the climate crisis.

Our approach aligns with the UKGBC's Framework for Net Zero Carbon Buildings by ensuring that impactful efforts are taken to reduce both operational and construction-related emissions, with only the residual emissions being offset.

Isabella Valencio,
Senior Sustainability
Consultant

Charlotte Bowles,
Sustainability
Consultant

We will work together to create buildings that future generations will recognise for pushing boundaries at this critical moment for us and the planet.

Why Planet Mark?

The UK Built Environment is currently responsible for 25% of total UK greenhouse gas emissions.

On average, Planet Mark certified developments make a **26% reduction in whole- life carbon emissions.**

Our unique process

We believe that every building, house or development should go beyond compliance to make society better, add value to the local community and contribute to economic prosperity. Through our Built Environment Programme, we help companies to embed sustainability at any stage of a building, from the design phase and operational emissions through to end of life.

1. Design Stage Evaluation

We help you to embed sustainability in every stage of your development, starting with design.

There are significant carbon reduction opportunities during the design stage of a development. Our Design Stage Analysis will promote meaningful early engagement and facilitate the exploration of low carbon design solutions.

2. Development Certification

We help you to reduce your whole-life carbon emission and engage your local community and supply chain through three simple steps.

We measure your whole-life carbon emissions, support you to engage your supply chain as well as with local primary schools, and help you communicate your ambitions and achievements at every stage of the development process.

Measure

Engage

Communicate

3. Fit out and Retrofit

We measure the whole-life carbon savings of your fit out and retrofit.

The Fit Out and Retrofit Certifications require the measurement and reduction of whole-life carbon emissions and includes the engagement with supply chain and local primary schools.

4. Property Certification

We support you and your tenants in making annual operational carbon reductions.

Our Property Certification quantifies a development's ongoing operational carbon footprint and sets annual reduction targets. We help you to engage and upskill staff onsite in sustainability and operational efficiency. We also support communicating sustainability commitments and achievements.
