

A large, abstract graphic composed of several overlapping red shapes. A large, bright red triangle points downwards from the top left. Below it, a darker red shape curves from the right side towards the center. The background is white.

Welcome to the home of
Climate Tech.

Sustainable Ventures

Our story.

We've always said we're on the side of the entrepreneur - they're at the heart of everything we do.

Since 2011, we've created Europe's largest cluster of climate tech and cleantech startups through venture development, workspaces, investment and commercialisation services.

Our Vision.

A world in which climate change and resource scarcity are addressed by commercial solutions.

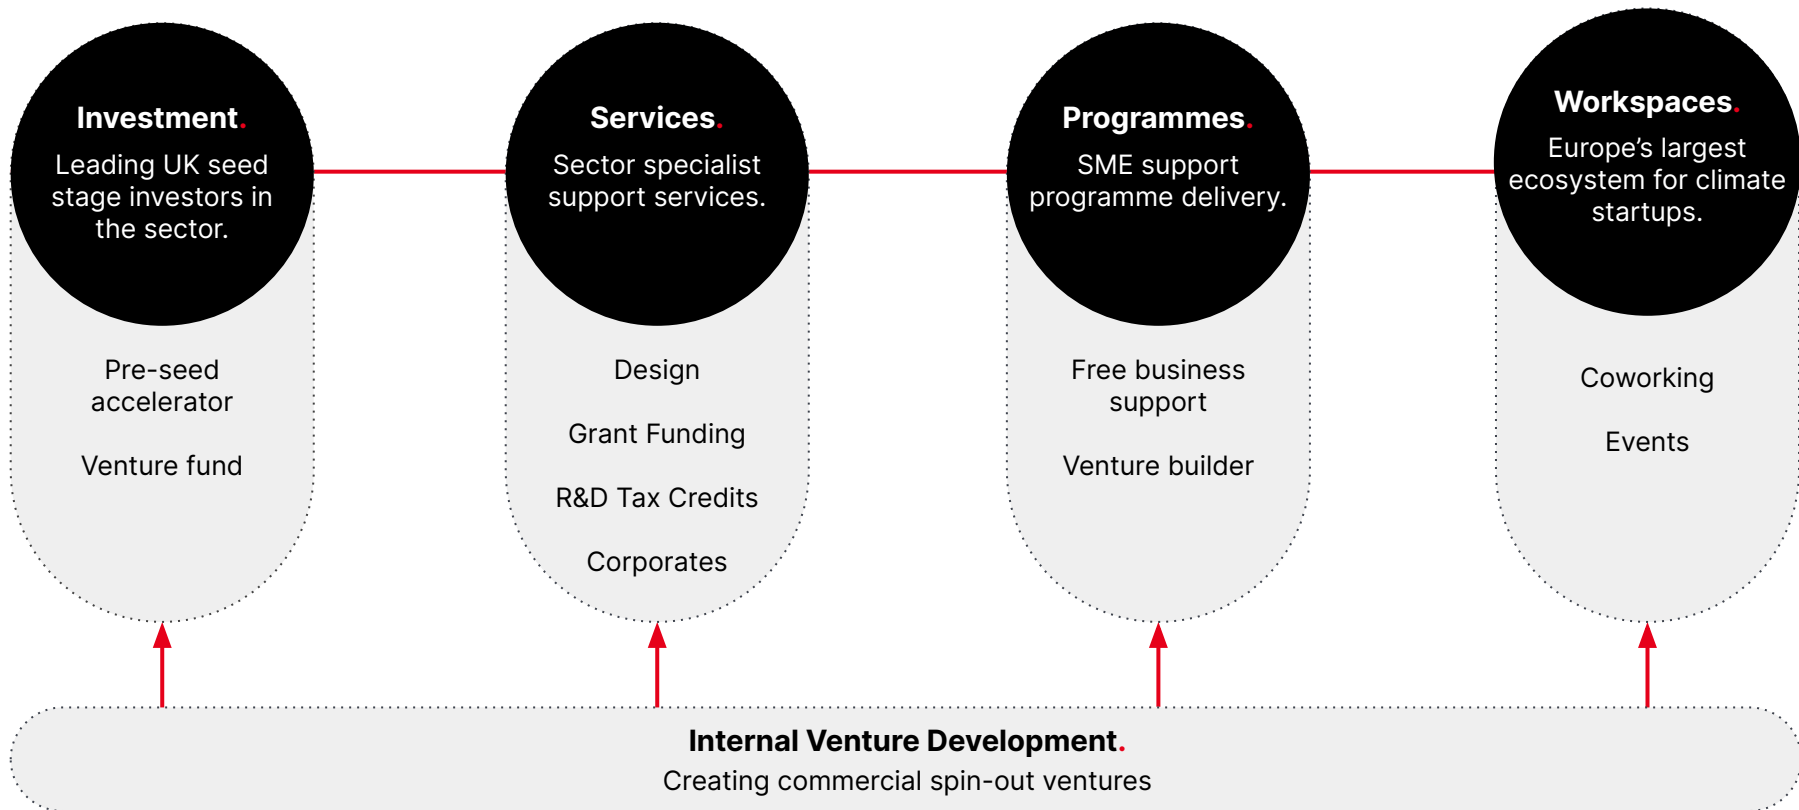

Our Mission.

To develop 1000 climate tech businesses by 2025.

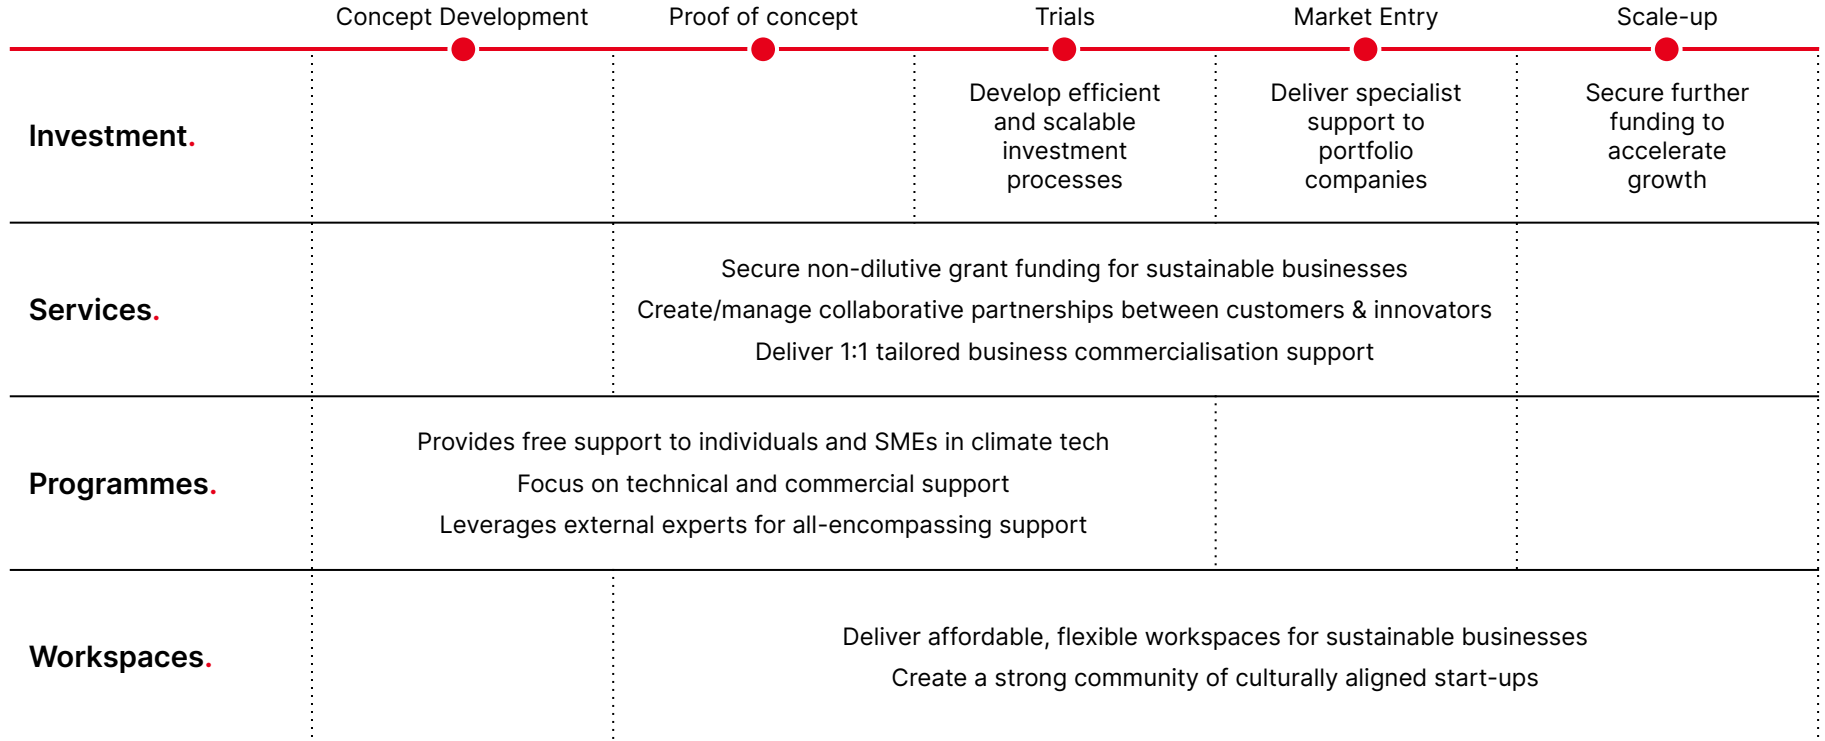

What we do.

Our integrated support ecosystem

Enhanced value creation.

From beermat to exit.

Workspaces.

We provide flexible and affordable office, workshop & events space to support the growth of innovative, sustainable companies.

Europe's largest cluster of startups in the sustainability sector.

Over the last 5 years our 3 sites have hosted over 100 companies and formed a focal point for public and private stakeholders to collaborate.

Investments.

We are already one of the UK's most active Climate Tech investors.

Our goal is to empower the next generation of businesses, redefining the way we consume energy, manage waste, produce food and apply smart resource technology.

Our deep expertise in this sector allows us to recognise potential stars and our value creation services help entrepreneurs rapidly scale their technologies, lowering failure rates and driving increased returns.

Services.

We use our specialist knowledge of the sector to bring additional funding and expert resources to leverage the internal capabilities of each start-up in our community.

Drawing on our venture development experience, we deliver a range of services tailored to start-ups & corporate innovation teams, including securing non-dilutive funding through innovation grants, design services and R&D tax credits.

Services - Grants.

We work with startups and scaleups to secure much-needed non-dilutive funding.

Drawing from our venture development experience, we compile the full application and appendices including strategy for the grant funding amount and scoping the proposed venture development project.

Start-up impact.

Grant funding is critical for development of sustainability and climatech innovations as they often have long and uncertain development timeframes. Raising grant funding also means that companies can develop their solutions further relying on investment.

Cloud Cycle is digitising concrete, enabling companies to improve concrete quality, reduce operational cost, waste and CO2 emissions.

We worked with Cloud Cycle from Oct 2019 - Oct 2020 to secure £1.3m in grant funding. This allowed them to refine their initial product & deploy pilot trials with key partners.

Services - R&D Tax Credits.

We help climate-tech companies claim back their R&D costs so that they can continue to develop and grow their business.

We take care of the full R&D claim, making sure the amount is maximised, and supported with thorough reports explaining the R&D work. We work on a success-fee only basis - no upfront fees.

Success rate

Start-up impact.

Money straight into your bank account within 8 weeks of submitting the claim (or a % off your Corporation Tax bill). We have a great track record of maximising R&D claims, thanks to our sector-specific knowledge, getting you back the maximum possible and helping you to extend your runway (your investors will appreciate it too).

We compiled an R&D claim for an PropTech start-up worth over £120k, which was received within 8 weeks at a time when HMRC was experiencing huge delays.

Services - Design.

We design impact-led brands, products & experiences for climate tech businesses.

Our multi-disciplinary design support helps climate-tech founders, teams & businesses to build and grow new, bold and impactful businesses that are better for people, and the planet.

Brand identities created

Start-up impact.

Considering design at the beginning of product development reduces the time and cost of change, while ensuring climate-conscious design and engineering is embedded at every stage. Our branding input allows clients to make meaningful customer connections.

Albotherm have developed a remarkable coating for glass that transitions from transparent to opaque at a tuneable temperature.

The team needed a way to demonstrate their innovative coating at pitches & events, so we created a thermal test chamber to showcase the material transition.

Programmes.

We provide a broad range of support offerings to deliver advice and expertise to climate tech SMEs and talented entrepreneurs.

We draw upon our commercial expertise and venture development background to provide support to 100s of start ups, allowing them to successfully exploit their innovations. Often the start ups we work with are unable to pay for this support themselves, our Programmes provide an excellent way for them to access this support free of charge.
