

# Your Decarbonization Partner

Solutions for IoT, renewables, energy storage, carbon management, and electric mobility

## About Univers

The global leader in decarbonization

Univers provides the world's most comprehensive decarbonization system. We help companies and countries optimize energy systems and reduce carbon emissions with accurate, reliable, and actionable decarbonization data.

Our EnOS™ (Energy and Environment Operating System) platform connects on-the-ground operational technology and in-the-cloud intelligence to deliver real-time energy data and data-driven carbon monitoring, reporting, and abatement.

**220 million**  
IoT Sensors Connected

**600+ GW**  
Renewable Energy Managed

**45 countries**  
Trusted by clients around the world

## Standards & Regulatory Compliance

Empowering your business to operate with security and credibility

We employ the most advanced ISO-certified security measures to safeguard your data. Our solution facilitates adherence to all major ESG reporting standards (e.g. CDP, SASB, GRI) and enables seamless 3rd-party data certification with leading providers. All within one single platform.

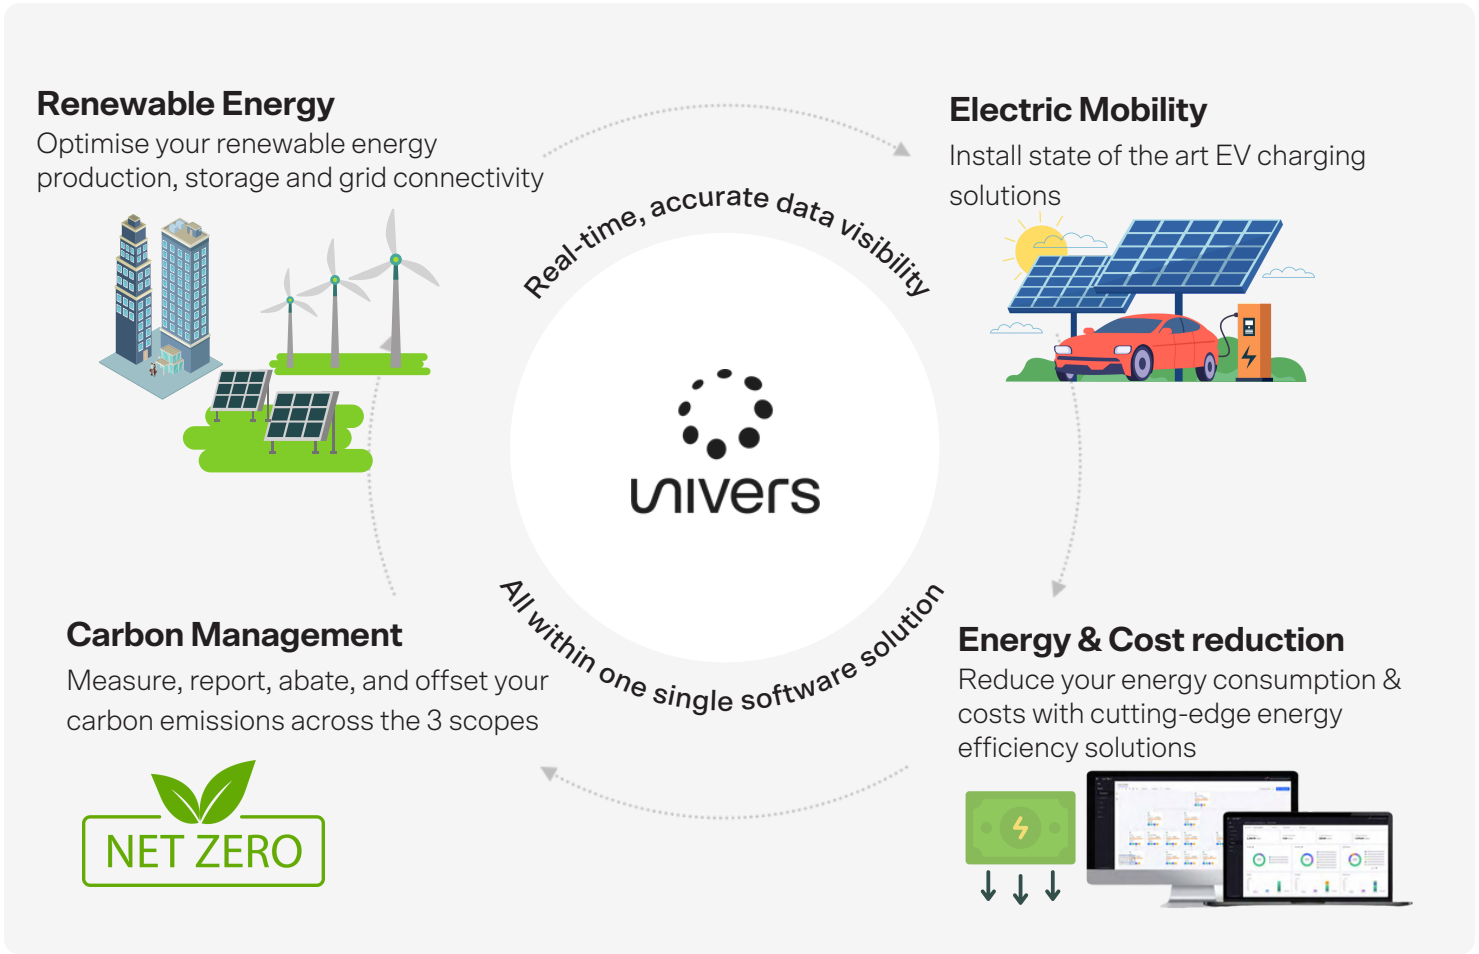

## 3-Step Guide to Accelerate Your Net Zero Journey

# Our end-to-end solutions

Tailor your decarbonization efforts to the unique needs of your business

EnOS™ Solution Suite enables your sustainability transformation with real-time control over energy usage and carbon emissions, accelerating decarbonization efforts. It connects disparate decarbonization processes spanning carbon monitoring, accounting, and offsets for energy management across renewables, batteries, buildings, and transportation.

## Supporting 800+ Global Customers
