

AlliedOffsets has the world's largest data source on carbon offsetting projects and prices. Our data is used by leading sustainability and carbon consultants, financial institutions, offsetting corporations, project developers, buyers, academics and others. Due to our diverse range of customers and data needs, we offer a number of different products and bespoke products including an online interactive platform containing our full database of 29,000+ carbon offsetting projects around the world, refreshed daily with updates direct from the registries.

Data Summary

Our extensive VCM database holds data on:

- 30,000+ global carbon offsetting projects
- 750+ CDR companies
- 10,000 carbon credit corporate buyers, including CDR buyers
- Carbon projects details from 24 registries
- Emissions data from over 1,000 corporates active that are active in the VCM
- The latest CDR investment figures by methodology and location

Products

Premium Dashboard

The AlliedOffsets Premium Dashboard contains the world's largest data source on carbon offsetting projects and prices. It's an online interactive platform containing our full database of 29,000+ carbon offsetting projects around the world, refreshed daily with updates direct from the registries.

Explorer

With the Explorer License you have access to the same dashboard as with the standard license, but you also have the ability to construct and run unlimited searches of the database combining any of the variables that you find relevant to produce spreadsheets, charts, graphs along with the elements above. This allows you to create specific reports/visuals to generate a business case or further explore specific areas.

API

For firms that require real-time access to our data, and wish to merge our dataset with their in-house data for customized analysis, we offer an API integration solution. This allows you to seamlessly incorporate our data into your existing infrastructure. As part of our API, we offer ten different end point modules that can be combined to best suit your company's data needs.

ADS

Advanced Document Search is a powerful tool built to streamline and enhance the process of searching for specific projects and data within documents. With its comprehensive search capabilities and advanced filtering options, ADS enables users to efficiently locate relevant information, making it an invaluable asset for businesses and individuals seeking targeted project data.

Bespoke Reporting & Advisory Services

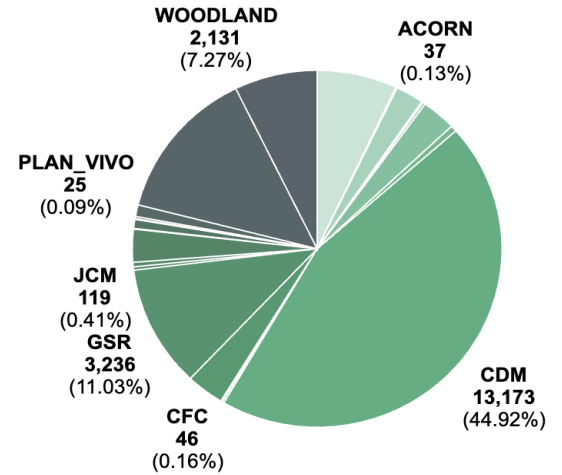

AlliedOffsets provides bespoke reports of statistical analysis and market strategy development including data regarding buyers, retirements by sectors, demand trends and demand forecasting.

In addition to bespoke reporting, AlliedOffsets provides additional advisory services.
