volan

Precise People Positioning Software

The Volan dashboard (above) provides precise historical data so you can swiftly identify those most at risk

REBUILD ATTENDEE CONFIDENCE

We created software that provides fully private, historical, and real-time data, giving you a multi-functional solution for safely holding in-person meetings

KEY FEATURES & BENEFITS

Contact Tracing

When a confirmed case is reported, run a precise trace across thousands of people within seconds and rank those *most* exposed using the most recent CDC guidelines. Avoid mass quarantines and eliminate inaccurate manual tracing.

Social Distancing

Receive automatic notifications when zones exceed capacity and easily keep social distancing guidelines in place.

Beneficial Analytics

Get access to fully encrypted data and analytics on attendee movements for meeting analysis, vendor leads and improvement to future meetings

Fully Private

- No Personally Identifiable Information (PII) stored on sensors
- No location positioning offsite
- PII is stored under AES-256 Encryption

- Only authorized users have access to attendee details
- Random numbers are assigned for location, sensors and sites
- Volan will never have access to PII data

Easy Installation

Rooms of all sizes are geofenced in minutes with small, unobtrusive Volan Shields.

No new technology to learn-- a Volan team member is always onsite managing the process and monitoring the dashboard.
