## **Cut Curing time**

## **Cure Simulator and Online Tg**

## Synthesites presents an industrial solution to save time and energy in curing

Synthesites present in JEC World the ultimate monitoring suite for the online Tg in composites manufacturing. The OptiCure suite in combination with the New Cure Simulator System and the Online Resin State (ORS) software provides the ultimate solution for saving curing time, improve quality and reduce scrap. The suite has been already used from aerospace applications up to wind energy infusion and bonding with great success.

No intervention in the mould or the autoclave is necessary.

With installations at leading manufacturing companies in aerospace, automotive, industrial and wind-energy and world-class research centres and Universities, the new intelligent process monitoring suite offers a complete solution for process optimisation, quality control and real-time process control to raise composites manufacturing to industry 4.0.
