

Pronat Aerospace : **JEC WORLD 2025 PRESS RELEASE**

For release PARIS, 4th March 2025

Pronat Aerospace has just received its first CMS 5-axis milling machine, with an Ultrasonic head for machining of Nomex and aluminum honeycomb, to produce smoother and more intricate shapes. This process also permits faster processing therefore reducing the production time.

Pronat's CNC milling department, with 3, 3-axis and 3, 5-axis milling machines is Israel's leading company offering milling of Rohacel foam and Nomex & Aluminium honeycomb airframe shapes.

The company has also invested in Creaform CMN 3D portable technology. By utilizing this laser scanning device, we are able to produce far more accurate measurements of large airframe parts and increases the production process.

Further information about the Pronat Aerospace advanced machining capability can be obtained from our Press Officer, Jonathan Weil on.....
