

PRESS RELEASE

Web Industries to Showcase Advanced Composite Manufacturing Solutions at JEC World 2026

Hall 5, Booth G27 – Paris, March 10–12

Marlborough, MA – February 27, 2026 – Web Industries, a global leader in composite material formatting and outsourced manufacturing, will highlight its latest advancements in composite formatting at JEC World 2026.

Held March 10–12 at the Paris Nord Villepinte Exhibition Centre, JEC World is the leading international composites event, bringing together more than 1,400 exhibitors, industry innovators, and researchers.

At the show, Web Industries will focus on how optimized material formatting strengthens process stability, reduces waste, and accelerates the transition from design to high-rate production. Effective formatting early in a program’s lifecycle allows manufacturers to scale automation more reliably and efficiently.

“Improving how we format composite materials has become mission-critical,” said John Madej, Chief Executive Officer and President of Web Industries. *“By tailoring materials for automated production, manufacturers gain more consistent performance, higher throughput, and better use of every meter of material. At JEC World, we’ll demonstrate how our capabilities help major programs industrialize with confidence.”*

Web Industries supports commercial aerospace, space, defense, UAV/UAM, and energy customers with a full range of mission-critical solutions, including:

- Thermoset tapes that expand AFP/ATL performance
- High-precision thermoset spooling
- Ply kits and pre-preg sets in a broad range of formats
- Thermoplastic Bias-Ply™ pads and spools
- Multi-Layer Insulation solutions with proven flight heritage

With expertise spanning slit tape, preforms, ply kits, off-axis formatting, and MLI manufacturing, Web Industries helps customers shorten development cycles, enhance repeatability, and deploy automation at scale.

About Web Industries

A 100% employee-owned company, Web Industries, Inc. is one of the largest and most diverse providers of precision converting and outsourced manufacturing. We help customers in the aerospace, wire and cable, medical, personal and home care, and industrial markets bridge their capability gaps and accelerate their go-to-market success by leveraging close, trust-based relationships to develop ingenious solutions precisely tailored to their needs. From project inception through commercialization, the company offers creative problem solving backed by deep technical and operational expertise.
