

VABER INDUSTRIALE S.p.A.
a Shamrock International Company

Plexus MA8105 cutting-edge structural adhesive

In 1957, Vaber Industriale began its activities producing adhesives for Original Equipment in the automotive sector.

It was located in Turin, the city that was to become the Italian capital of the automobile with the presence of prestigious names like Lancia, Alfa Romeo and Fiat.

In 1965, the company started the production of a wide range of products for the household appliance and air-conditioning industries.

In the 90s, thanks to the collaboration with Plexus, Vaber began the development of a new generation for gluing bumpers, spoilers, dashboards, body panels, front grilles and many other applications made of thermoplastic, composite and metallic materials.

Being fully regrind compatible, Plexus makes it easier to recycle plastic components, eliminating the need to cut bond tracks.

Plexus MA8105 GB is the result of more than 35 years of experience creating and formulating high performance MMA adhesives.

Lowers assembly time resulting in high throughput and consistent, reliable production.

It is an advanced direct-to-metal, two-part methacrylate structural adhesive, designed to achieve structural bonding of a wide range of metals, plastics, and composite assemblies in industrial and transportation manufacturing.

MA8105 expands design possibilities by offering primerless adhesiveness to metals (including galvanized steel), coatings, plastics including nylon (polyamide), and composites.

With a versatile 1:1 mix ratio, MA8105 has a unique combination of low odor, high strength, toughness, and fatigue resistance.
