A trusted partner, worldwide

Our clients count on us for world-class medical consultancy, services, training and equipment. We tailor our support to each unique set of needs, from essential kit and workplace training, to deployed medics and remote support.

Our purpose is to empower people to save lives. Our mission, to equip and enable first responders at any level to preserve life in any environment.

We're a trusted partner to clients across many different sectors, and we work all over the world from our head office in the UK.

All medical needs

Our consultancy services preserve life, protect reputations and mitigate liability in the face of varied and complex medical needs. Benefit from our 360-degree approach, and secure the right resources to manage emergency situations confidently, competently – and safely.

Our training is delivered by experts, is class-leading and is flexible and relevant to your organisation's needs. Training is delivered face-to-face in our residential training location, on-site and digitally via e-learning.

Our consultancy approach

We're here to help you assess and manage your medical risk.

We build, implement and support a complete and completely tailored medical plan.

Clinical governance

Clinical governance is how your organisation stays accountable and effective in your healthcare responsibilities.

It's your framework for establishing and maintaining clinical excellence. It ensures medical responders have the right equipment and training to treat patients safely.

If it's the case that even one member of your team or workforce could face a medical emergency in the course of their duties – you need clinical governance.

Ultimately, it safeguards the interests of patients and responders, as well as your corporate reputation and liability.

Without the right structures and protocols in place, there is the risk of adverse patient outcomes, direct

claims against individual responders, litigation, and negative reputational, financial and legal consequences.

We scope, implement and run clinical governance programmes for both public and private global organisations. We provide clinical support, develop standard operating procedures and give advice – all of which limits your risk and helps protect your people and your reputation.

We make sure the right personnel, with the proper training, do the right things at the right time. So your practices stand up to closest scrutiny in the case of an emergency.

Your framework for establishing and maintaining **clinical excellence.**

Needs analysis

Our first step is to work out your needs.

A comprehensive audit looks at your requirements and current medical kit and capabilities from every possible angle. The process will vary depending on your needs. It usually follows these stages:

Discovery

In-depth discussion with people in charge to understand expectations.

Site visit

Site visit to get a firsthand feel for how things are working now.

Desktop review

Assessment of all current documentation: planning; standard operating procedures (SOPs); liability; mitigators; equipment inventory; training history and schedule; liaisons across the business; medical evacuation provisions.

Output

We create a presentation and a report of our findings, all overseen by our Chief Medical Officer. With this 360-degree audit, we establish how well your current setup meets your medical management needs, identify gaps, and recommend solutions.

What next?

We create a plan to fill the gaps. Each bespoke medical management plan generally covers the three key areas of training, equipment and governance, and may also include enhanced support like our Reachback telemedicine service, or medical evacuation.

We look at all needs, current medical kit and capabilities from every possible angle.

Training

Make sure your people are prepared with the right training. We deliver bespoke and standardised training for defence, emergency and corporate and private clients in the UK and around the world.

Highly experienced practising doctors, paramedics and nurses lead your training courses. Where it's appropriate to the course content, we recreate the kinds of environments your teams may have to negotiate.

Training locations

Students find space to focus at our discreet, secure residential training complex, where two classroom blocks and outbuildings are set in more than 11 acres of mixed terrain.

Our unique facility is an unrivalled learning environment for medical training. We can also deliver a high-quality training experience on location with clients and via e-learning on our digital learning platform.

Courses

Beyond helping your students achieve nationally and internationally recognised qualifications, we design bespoke training to address challenges specific to locations, organisations, roles and environments.

Examples include:

- ▶ First Response Emergency Care (FREC) Level 3
- ▶ First Response Emergency Care (FREC) Level 3 Refresher
- ▶ First Response Emergency Care (FREC) Level 4
- ▶ Mental Health in the Workplace Level 2
- ▶ Mental Health in the Workplace Level 3

Qualifications for medics

- ▶ Helicopter Emergency Medical Services (HEMS) Helicopter Crew
- ▶ Major Incident Medical Management and Support (MIMMS)
- ▶ Pre-Hospital Emergency Ultrasound Course
- ▶ Prometheus Team Medic Course
- ▶ Remote Road Traffic Collision Management & Casualty Extrication
- ▶ Specialist Pre-Hospital Emergency Resuscitation (SPHERE™) Course
- ▶ Emergencies in General Practice

Specialist environment courses

- ▶ Surviving Adventure
- ▶ Tactical Care Officer
- ▶ ExpeMed™ Expedition Medicine
- ▶ Medical Management of Toxic Incidents
- ▶ Confined Space and Collapsed Structure Rescue
- ▶ Medical Management of Vehicle Accidents
- ▶ Management of Paediatric Emergencies

Qualifications for non-medics

- ▶ First Aid at Work (FAW)
- ▶ Emergency First Aid at Work (EFAW)

Highly experienced practising doctors, paramedics and nurses lead your training courses

Equipment

Equip your teams at any skill level to preserve life in any environment. We specify and supply category-leading devices and complete kit for trauma treatment in all contexts, through our parent company, Safeguard Medical.

Equip your teams

Haemorrhage Control

Circulation

Airway Management

Respiration

Head and Hypothermia

Burn Treatment

Treatment Support

Category-leading devices and complete kit for trauma treatment in all contexts.

Medical advisory board

Whether medical strategy is a new need in response to global events, or has always been a priority for your organisation, the Prometheus medical advisory board service can help you make the right call.

For organisations without in-house medical support and expertise, we can provide an expert team to guide key decision makers and help with future planning through medical management support.

Medical management support when you need it most.

No incident is too large or small for remote medical support.

Reachback telemedical support

Reachback guarantees you access to UK consultant-level clinicians – specialists in emergency and trauma medicine – 24 hours a day, 7 days a week, 365 days a year.

There's no switchboard, and no time on hold: just a direct connection to world-class remote medical assistance.

This support enhances the capabilities of your on-site first-responders. With Reachback support, they can dispense and administer drugs, carry out investigations, feed data back for analysis, and make more involved clinical decisions than their training level would ordinarily allow.

No incident is too large or small for us to offer guidance. The result is the right intervention sooner, and smoother handovers to wider emergency services where necessary. Better outcomes for the patient, and better outcomes for your organisation.

Clients all over the world take advantage of Reachback, as a supplement to a medical training programme, alongside our clinical governance support package or as part of our deployed medics service.

Specialist medics, on call and ready to treat, anywhere in the world.

Deployed medics

Along with planning, training and equipment, sometimes the right solution is a qualified clinician, familiar with your setting and ready to treat at a moment's notice. For one-off events or long-term contracts, we can deploy specialist medics anywhere in the world.

We carefully select our clinical team of consultants, doctors and nurses, experienced in a wide range of environments and scenarios. Opt for deployed medics for direct care or training to enhance your on-site, on-call medical capabilities.

We select and structure teams with the right qualifications and experience for the environment and the medical need.

- ▶ Highly trained, clinically skilled medics
- ▶ Hand-picked for the client and task at hand
- ▶ Extensive operational experience in the deployment environment
- ▶ Personal, discrete medical care
- ▶ Supported by Prometheus Reachback 24/7, 365 days a year

Medical evacuation

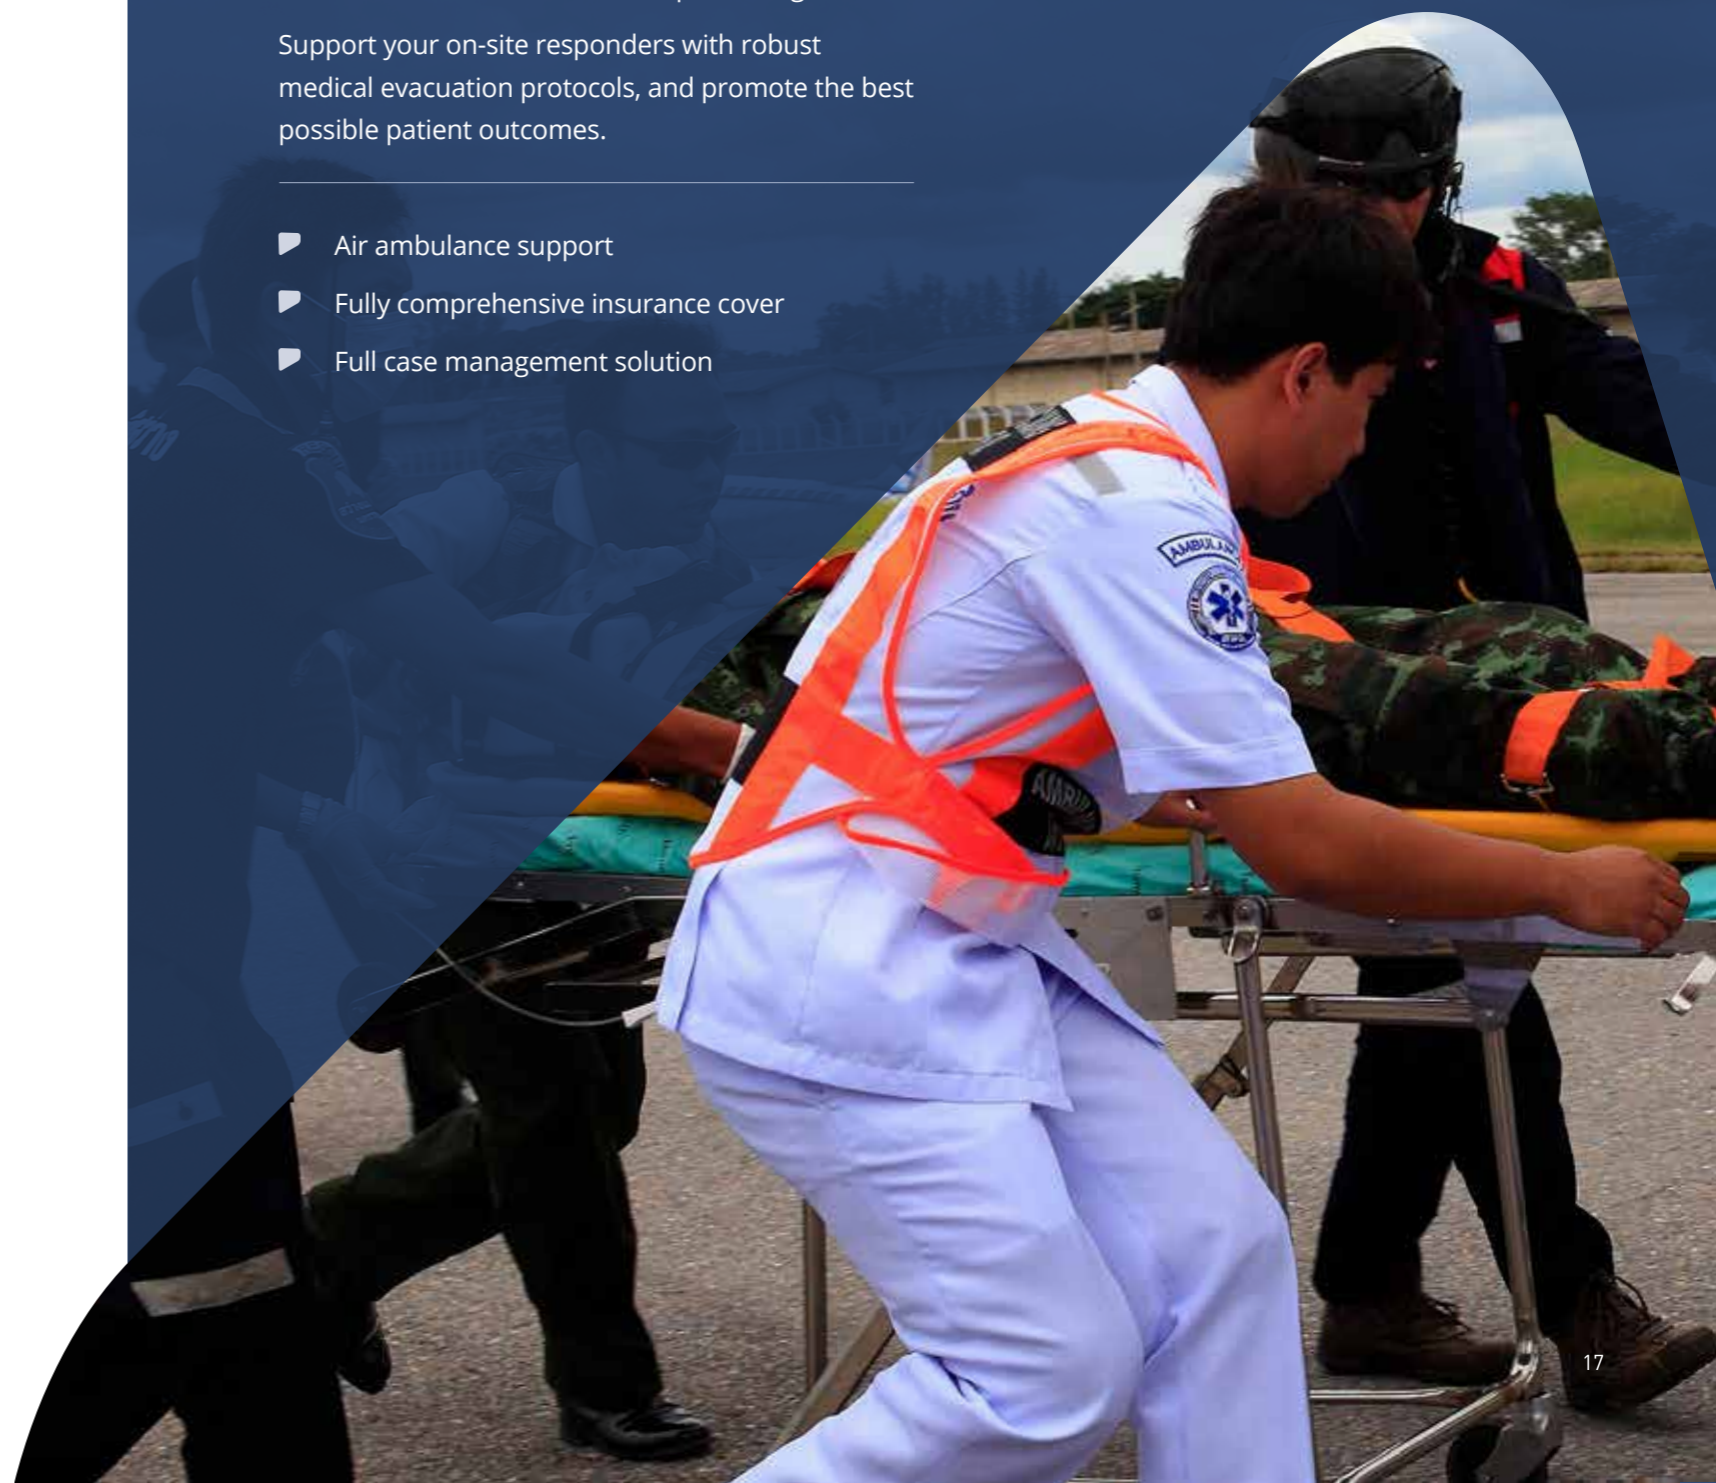

Even with the very highest level of trauma response preparation, some situations will demand more from on-site medics than they can achieve with the training and resources they have on hand.

In these scenarios, in-hospital care may be the next step. Particularly in remote or hostile environments, fast, safe evacuation is critical to preserving life.

Support your on-site responders with robust medical evacuation protocols, and promote the best possible patient outcomes.

- ▶ Air ambulance support
- ▶ Fully comprehensive insurance cover
- ▶ Full case management solution

We liaise with the treating doctor, monitor the patient's condition, establish transportation clearance and booking, and secure a hospital bed. In the event of death, we arrange for repatriation, with due sensitive handling of the case.

Safeguard Medical

We are proud to be part of Safeguard Medical.

Safeguard supports and builds on the global legacy of its four industry-leading member companies. Extensive experience in tactical medicine comes together with law enforcement medics, programme managers and researchers to create clinically-led solutions.

We develop category-leading devices for treatment and training, and world-class clinical training for first responders in the military, the emergency services, law enforcement and major industry.

Together, we equip and enable first responders at any skill level to preserve life in any environment.

Together, we empower people to save lives.

Category-leading devices,
clinically-driven solutions
and world-class training.
