

Holaras FOD Sweeper keeps airport operation areas safe and operational

Large surfaces at airports need to be swept clean and safely within the shortest possible time, so that air traffic and all ongoing operations are not disrupted. The Holaras FOD sweeper is specially designed for cleaning large areas. Towed behind a towing vehicle, the sweeper not only ensures the highest level of FOD prevention, but also provides fast and efficient cleaning of paved air operation areas.

The Holaras FOD sweeper is the best solution for dealing with FOD:

- 7 metre sweeping width with three units linked together
- Can be coupled behind different towing vehicles
- Easy and single person operation
- Minimal maintenance costs
- Sweeps FOD of different sizes and materials with ease
- Spacious 400 litre FOD Storage box

Customer experience: Düsseldorf Airport

Since 2018, Düsseldorf Airport has been using the FOD Sweeper, which fulfils its task to the fullest satisfaction. Holaras was chosen because the price/performance ratio was right. The performance must remain high throughout the entire service life so that no FOD, even the smallest, is left lying around. Since we sweep twice a week, the machine has to withstand intensive use. A big advantage over the competition is that the wear and maintenance of the Holaras sweeper is minimal. This saves time and money."

Mr. Ulf Hahn, Airfield Engineer Technician – Flughafen Düsseldorf GmbH
