

ECONOMICAL AND SUSTAINABLE WINTER SERVICE WITH KAHLBACHER ATTACHMENT SOLUTIONS

At the Kahlbacher Stand B35 there will be one big topic: how should winter service look like in the future and how can we make it more economical and sustainable?

For 75 years Kahlbacher has been in the snow clearing business and a reliable partner for airport solutions. This years GSE Expo Europe will be about attachment solutions for multifunctional vehicles to face the challenges of airports. On the one hand maintenance costs should be as low as possible and on the other hand winter operations should be prepared for the toughest conditions. Kahlbacher is convinced that attachments will make winter service more cost-effective and sustainable.

- Powerful but simple attachment solutions
- multifunctional vehicles and year-round use
- Year-round use for carrier vehicles
- Improve investment volume
- Lower maintenance costs

SNOW POWER SWEEPER SPS 530

The SPS 530 is a PTO-driven sweeper that was designed for winter service at airports with the focus on high performance and excellent sweeping characteristics. This resulted in the trailer version with steering axle, which provides enough space for snow ejection and excellent manoeuvrability.

SNOW CUTTER BLOWERS

The Austrian manufacturer has a full line-up of attachment snow cutter blowers that are driven by the PTO of a multifunctional vehicle. Traktor manufacturers like the Fendt and Claas deliver standard agricultural machines with over 500 hp from the factory, which are converted to mighty snow removal machines with snow cutter blowers like the KFS 1150 and the KFS 1250.
