

Nordic Heater, based in Kungsängen, northwest Stockholm, is a premier Swedish manufacturer of aircraft heaters designed for both large and small planes, serving a global market. With over 50 years of experience, our extensive product range meets virtually all heating requirements.

Our uniqueness lies in our in-house production facility in Kungsängen, where we collaborate closely with our sister companies within the Steelex Group. This ensures exceptional quality and innovation in every product we create.

As the market leader in aircraft heater production, we prioritize environmental sustainability in everything we do. Our heaters are crafted from stainless steel, and we strive to minimize resource and energy use during production. Our dedication to quality and sustainability is reflected in our ISO 9001, 14001, and 45001 certifications.

We offer a diverse selection of heaters, including electric, diesel, and our latest battery-powered models, with capacities ranging from 42 kW to 200 kW. We are particularly excited to introduce the E50, a new version of our popular E42 electric heater, specifically designed for the American market.

We invite you to visit our stand at EX56 to explore the E50 and discover our range of innovative heating solutions. Experience firsthand why Nordic Heater is the trusted choice for aircraft heating needs worldwide.
