THE HEALTH & WELLBEING BENEFITS OF CORK FLOORING

WITH RECORK®

Good for you, good for the planet. New brand Recork® has reinvented the humble cork flooring and brought it into the 21st century. Not only is cork the natural flooring choice that benefits the planet by tackling climate change head on, it also has a number of incredible health and wellbeing benefits to be enjoyed.

LONG-TERM PERFORMANCE

If properly looked after, cork flooring can last decades. Designed to be extremely tough, Recork's® innovative surface finish delivers outstanding performance and durability, protecting the cork floor from the rigours of modern life. After the floor is laid, the HFX finish is ultra matt, extremely scratch resistant and provides outstanding wear and chemical resistance.

Unlike wood floors, cork's exceptional elasticity and compressibility allows the flooring to adapt to pressure from heavy foot traffic and bounce back from impacts without suffering damage, recovering to its original shape.

THERMAL & NOISE INSULATION

Recork's® exceptional insulation properties come from its unique honeycomb structure, with millions of air-filled cells. Thermal insulation means the floor feels warm, without the need for underfloor heating, while acoustic insulation allows sound to be absorbed, creating a tranquil environment that promotes productivity and concentration. Cork creates an extremely effective sound buffer as 68% of walking sound in a room is absorbed by Recork® flooring.

INCREASED WALKING COMFORT

Delivering incredible comfort, Recork's® elasticity reduces the heel strike impact and related body tension associated with hard floors, while being non-slip and providing sufficient stability to reduce physical strain and prevent body fatigue.

CLEANER AIR

Cork is not only soft underfoot but it also improves health through purer, cleaner air. As cork flooring doesn't shed any microfibrils, it means it is naturally antimicrobial and hypoallergenic and therefore doesn't harbour dust. Recork® emits exceptionally low levels of volatile organic compounds (VOCs) and is third-party certified for air quality, with accreditations including TUV Proficert Premium, Blue Angel and GEV Emission EC1Plus.
