

## Ultrafabrics Unveils the Sustainable Innovation Lounge at Clerkenwell Design Week 2025

Ultrafabrics demonstrates that sustainability doesn't have to come at the expense of performance or style with the launch of the Sustainable Innovation Lounge at Clerkenwell Design Week, a dynamic space where sustainability converges with cutting-edge material advancements.

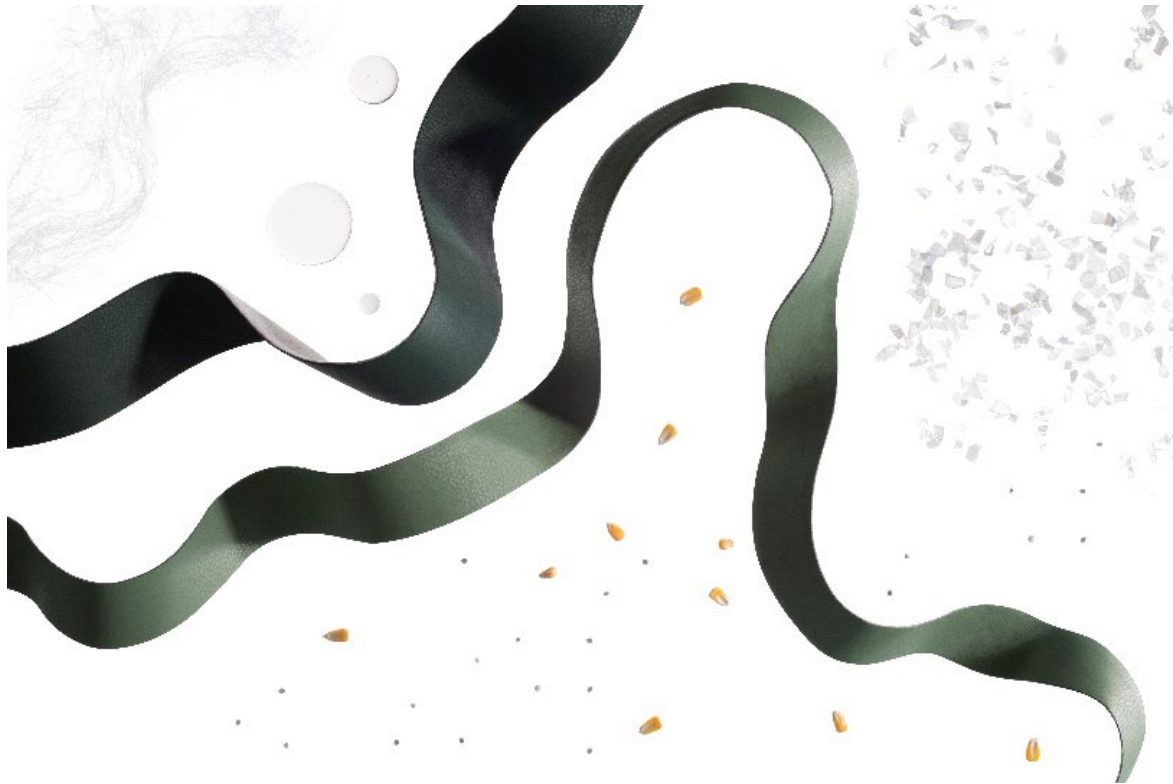

For over 25 years, Ultrafabrics has pioneered the development of premium performance fabrics that challenge industry norms. From introducing sophisticated PVC-free alternatives to leading advancements in biobased resins, recycled materials, and rapidly renewable ingredients, our journey is one of relentless innovation and responsible manufacturing.

Visitors to the Sustainable Innovation Lounge will embark on an immersive journey tracing Ultrafabrics' commitment to responsible production. A curated timeline of key sustainability milestones will showcase how we have redefined performance fabrics while maintaining luxury and durability. Previews of future innovations will allow an exclusive insight into our Japanese engineering labs, unveiling the latest breakthroughs in sustainable fabric technology.

Today, all Ultrafabrics-branded products sold to the furniture, healthcare, recreational vehicle, marine, aviation, and accessories markets contain at least 50% renewable and/or recycled materials. These new ingredients are scalable, plentiful, and maintain our performance standards, including: FSC/PEFC-certified rayon, recycled polyester, and Susterra® propanediol biobased resin.

First introduced in 2019, Volar Bio has continued to evolve and now features a 66% blend of recycled, rapidly renewable, and biobased content. In 2025, we are expanding this collection with nine new colours, inspired by the raw beauty of Earth's natural resources. This continued evolution underscores Ultrafabrics' unwavering commitment to sustainability, offering a diverse portfolio of high-performance materials that meet the demands of modern design without compromise.

Ultrafabrics invites designers, architects, and industry leaders to experience the Sustainable Innovation Lounge and explore the future of performance fabrics. Discover how luxury and responsibility coexist in materials that redefine possibilities.

### **About Ultrafabrics**

Ultrafabrics creates premium, high-tech materials that are reshaping the world of performance fabrics. The company is the trusted resource when creating beautifully designed and comforting spaces. Rooted in Japanese craftsmanship, Ultrafabrics' continuous investment in innovation, sustainability, and development has resulted in a range of polyurethane materials suitable for both indoor and outdoor use. The brand's growing client list of luxury brands spans many industries from residential and contract furniture to automotive, marine, recreational vehicles, and aviation.
