

## **Troldtekt Showroom welcoming visitors to Clerkenwell Design Week**

Danish wood wool acoustic panel manufacturer Troldtekt will be welcoming visitors to its shared showroom at Clerkenwell Design Week, running between 20<sup>th</sup> - 22<sup>nd</sup> May.

Located at 45 St John Street, London EC1M 1AN and hosted within the Bachmann showroom, Troldtekt has a wide selection of its ceiling and wall panels on display along with literature and samples. Members of our team will be on hand to help with inspiration and guidance for visiting architects, specifiers, developers and installers.

We will be hosting three discussion panels over the course of the show with speakers talking about the latest trends and developments in acoustics and sustainable building practices.

20<sup>th</sup> May 16.00 to 17.00 - Project highlight / Sustainability / Cradle to Cradle

21<sup>st</sup> May 16.00 to 17.00 - Project highlight / Sustainability / Acoustics

22<sup>nd</sup> May 16.00 to 17.00 - Acoustics in the built environment

On all three days we'll have a mixologist fusing some creative cocktails between 15.30 and 18.00 so come along, have a cocktail (or mocktail) and learn more about the wonderful world of acoustics!

One of the exciting and innovative new products on display at the showroom will be Troldtekt Plus 25. Forming part of the new Troldtekt Plus range, this panel is only 25mm thick but can achieve Class A sound absorption at a suspension depth of 200mm. This is accomplished with the inclusion of a non-woven acoustic fleece applied to the back of the panel. More information about Troldtekt Plus is available here ([www.troldtekt.co.uk/products/product-range/troldtekt-plus](http://www.troldtekt.co.uk/products/product-range/troldtekt-plus)).

The showroom is also a living example of the 'design solutions' range, combining impressive acoustic performance with expression and character ([www.troldtekt.co.uk/products/product-range/design-solutions](http://www.troldtekt.co.uk/products/product-range/design-solutions)). This collection comprises panels with CNC milled surfaces in symmetrical, asymmetrical, three-dimensional and geometric patterns allowing users to create feature walls and ceilings in a staggering array of configurations and colours.

## **PRESS RELEASE**

Troldtekt's wood wool acoustic panels are Cradle to Cradle Certified® at Gold level and manufactured using wood from certified forests (PEFC/09-31-030 and FSC®C115450), positively contributing to a building's BREEAM, WELL or LEED points. Panels can also be manufactured with FUTURECEM® which achieves an approx. 30 per cent lower carbon footprint.

All Troldtekt ranges have a minimum expected life cycle of 50 years and can be supplied as natural wood, unpainted or finished in almost any RAL or NCS colour. Panels can also be A2 fire-rated in accordance with EN 13501 (a2-s1,d0).

To arrange a meeting and experience the acoustic & aesthetic in a working environment, please contact Steve Mansell (07555 176055) or Robbie Herrick (07496 681040) who would be delighted to welcome you to the showroom and guide you through the products on show and our listings on NBS and the Materials Bank.
