

Your WorkCharge powered by Zens

- Product Summary -

Your WorkCharge is a market leading workspace management system that gives facilities teams a real-time 'picture' of how people engage within a workplace environment.

Not just a charging port, which is an added bonus; Your WorkCharge maximizes office efficiency by tracking if a workstation is in use, by whom, and for how long. The smart management system, which is powered by Zens technology, utilises an easy-to-use reporting tool in the dashboard that gives accurate insights and data based on how users interact within each space.

Your WorkCharge can be used across multiple workstations, including shared desks, pods, boardrooms, and private office space, and is revolutionising how smart workplaces manage their corporate real estate.

Your WorkCharge is Apple Certified and has an LED light system to tell users if a workstation is available, in use or has been used by someone else already that day.

- Company Summary -

Your Workspace are award-winning smart workplace experts and are the no.1 smart storage providers in the UK. As market leaders with decades of experience working across every sector; Your Workspace have helped organisations around the globe transition to a smarter way of working through their innovative smart workplace solutions.

- Product Sustainability -

Recycled Materials

All our chargers are here to last. Utilising materials such as recycled plastics, aluminium and even high-quality wool or glass.

Sustainable Packaging

We aim to use as much sustainable materials as possible to package and ship your wireless chargers. Over 90% of all out-packaging material is made from recycled paper.

Less cables = less waste

How many times have you replaced your charging cable over the lifetime of a phone? And having 2 phones, an Apple Watch and AirPods might even mean more than 2 cables most of the time. And you will have the opportunity to extend a base station with extensions to charge multiple devices. This way you will never have to buy a brand-new charger and throw away the previous one.

Green office

Using Zens intelligent wireless technology, you can collect data and view real-time stats on your dashboard, to efficiently manage your office. A sensor integrated in the wireless charger (PuK) gathers data from every workspace and gives you insights about office occupancy and shows you how and where to reduce costs. If your office is at 65% capacity every Friday afternoon, you can pre-set specific zones or floors and automatically block 35% of your office to save on heating, lighting, maintenance, and cleaning costs.

- Product Design Innovation and Technology -

Your Workspace are dedicated to ensuring that we are at the forefront of technological advancements and smart workplace innovation.

Product Development

Over the past 24 months, we have seen more and more businesses transition to a smart way of working with the integration of smart technologies. Your Workspace are smart workplace experts and as a result have expanded our product offering to ensure we can offer our prestigious client base a fully immersive smart workplace experience.

Remote Management

With no geographical boundaries, Your WorkCharge can be managed remotely across multiple floors, locations and even countries. An individual desk, a pod or even a meeting room table can be blocked, released, or marked as used. Management teams can monitor the use of each workstation and analyse desk occupancy rates in real-time via reports found in the management dashboard.

Integration and Automation

Your WorkCharge can integrate with existing workplace apps and building management systems to offer a truly smart workplace experience. Employees can reserve a desk or workstation on their commute and receive instant notifications all in the palm of their hand.

Customisable Aesthetics

Some of the world's biggest brands rely on Zens wireless technology. Whatever your business, Zens wireless chargers can be built into virtually anywhere; office furniture, retail surfaces, transport, hospitality, lifestyle and home products. The covers can either be visible or hidden – it's up to you – you even can display a customised logo on the cover to help strengthen your business's branding.

- Commercial Viability -

Your WorkCharge is an innovative and integrated smart workstation management system that not only helps facilities teams to manage desk allocation and space but also saves time and resources on cleaning.

The latest smart product offering from Your Workspace gives businesses full and measurable control over their working environment. Open or close down workstations according to desk use to reduce corporate real-estate and energy costs.

The integration of Your WorkCharge will also take up less floor space than other traditional, non-smart desk and workstations due to the collaborative, shared nature of the system. Multiple users can use multiple desks and travel freely within the available space as opposed to offering one fixed station per user.

Corporate real estate costs will be reduced as organisations utilise their building more efficiently and may even choose to consolidate certain areas and floors.

- Environmental Impact -

Your Workspace are committed to leading the way in minimising the impact the business has on the environment. Having recently joined the Gold Standard, we aim to be carbon neutral by 2025 and have environmental policies in place to help us achieve this.

Qi-certification

Qi is the global safety standard for wireless charging. All our products are Qi-certified. This means our wireless chargers are built to last. With attention to quality and the utmost safety standards for you and the environment.

Digital influences

Measure, process and analyze occupancy data immediately. Do so for your whole building or choose a specific area. At any moment in the day or over a certain period.

Use the comprehensive Zens WorkCharge data to optimize your office space. Get insights in the needs of your employees per type of workplace, be it for focus, collaborative, phone, social or more. Create safe flexible and collaborative working areas – much favored by your millennial workforce – while minimizing your carbon footprint and lowering your costs.
