

PRESS RELEASE

Hamilton Litestat
CDW - Stand: E5

Hamilton Litestat shines light on new range of toggle switch designs.

Never one to rest on their laurels, Bristol-based manufacturer of decorative wiring accessories, Hamilton Litestat celebrates the late Autumn 2022 launch of their new range of toggle switch designs at Clerkenwell Design Week.

Increased degrees of customisation – as standard...

Appealing to those with a particularly keen attention to detail and desire for a high-end aesthetic, each new design offers a unique machined finish and form that sets them apart from market alternatives and indeed Hamilton's own current toggle design.

Introducing the designs...

The two designs are a natural evolution of each other – both taking a cylindrical form, with subtly rounded corners and brushed finish to the facing edge, which makes them particularly kind on the eye and to the touch.

The first design features an understated knurled diamond pattern finish to the upper / outermost part of the switch – adding a subtle yet tangible texture.

Design 2 offers a unique three-groove form, providing a bold and yet effortlessly stylish option for both contemporary and period interiors.

The new toggles are machine-turned from Satin Brass, and available in either Satin Brass, or an on-trend Matt Black finish (RAL 9005) high quality powder coating. As with all Hamilton collections, custom designs and finishes are available for those totally unique projects.

Unrivalled choice

The choice that the additional designs provide in shape, quality and finish, rivals that of any other decorative lighting accessory manufacturer available in the UK. So, if you're wishing to support British manufacturing, you now have greater opportunity to ensure your lighting and electrical wiring accessories truly complement your interiors scheme.
