Linea CFX: Framed for an on-trend finishing touch

With customers seeking ever increasing degrees of personalisation within their interiors, the Linea CFX range from Hamilton really comes into its own.

Supplied as a two-part plate and frame design, which clicks together using Hamilton's clever concealed fixings (CFX), Linea CFX provides Interior Designers with the opportunity to exploit their creative licence to the full.

Six collections within the range

A long-established designer range within Hamilton's line-up of decorative wiring accessories, Linea CFX now consists of six collections – with the latest addition (Linea-Tetra CFX) launched in autumn/winter 2022.

The unique characteristics of each frame design within the range, creates a veritable palette of contemporary and traditional options, making it easy to select the perfect collection to complement any theme.

Rondo – provides a smooth, rounded frame.

Duo – features a minimalist straight-edged frame.

Scala – delivers a bold, stepped edge frame.

Perlina – contributes a classic beaded-edge frame.

Georgian – offers a traditional rope design.

Tetra – brings a contemporary 45 degree bevel-edged design.

Mix and match up to eleven different finishes

Each frame design is available in up to eleven different finishes including Antique Brass, Black Nickel, Bright Chrome, Connaught Bronze, Copper Bronze, Etrium Bronze, Polished Brass, Richmond Bronze, Satin Brass, Satin Nickel, Basalt Gray, Matt Black and Matt White. Face plates are also available in the same eleven finishes as well as Satin Steel.

Create a unique design feature

Because face plates and frames within the Linea range can be independently selected, there is the option to mix and match finishes to create a unique design feature out of an otherwise predominantly functional essential within your interior scheme.

Mix polished with matt metallics for a gilt-edged touch, or matt with satin metallics for a sophisticated finish. Why not try mixing and matching contrasting metallics to create a look that really stands out from other off-the-shelf alternatives?

Linea CFX provides the scope to create something really unique with a truly luxe appeal.

Inserts to complement your desired look

Whether you're looking for inserts such as rocker or toggle switches and dimmer knobs to stand out from the face plate or blend in, they can be chosen to match either frame or face plate finish.

Insert surround finishes are available in black, white or NEW Quartz Grey, making it easy to find a finish to complement your desired aesthetic.

Hand finished for a quality look and feel

While face plates are pressed from sheet material, frames within the Linea CFX range are cast and then finished by hand, creating a product that looks and feels robust and authentic in comparison to non-cast alternatives.

The concealed fixings (CFX) within the Linea range provide a stylish, screwless finish that makes wiring accessories easy to install and face plates and frames easy to swap out, should the interior theme evolve.

Function follows stylish form

With functionality being the very necessity for decorative wiring accessories within any interior project, Linea-Tetra CFX offers a range of switch and socket options. These include standard and wide rocker switches, Hamilton's NEW range of toggle switch and dimmer knob designs, double pole switches, power sockets, USB Charging sockets and connection units.

Grid & EuroFix options are also available within Linea CFX – allowing you to create bespoke, application-specific designer switch plates and sockets according to your customers' needs. These may include media plates, dedicated USB charging plates or plates to facilitate and operate any appliance in the kitchen.
