

Legrand set to transform workspace furniture with launch of Incara

Legrand UK & Ireland has announced the [launch of Incara](#), a new product range of multi-functional, economic power devices for the modern workspace.

With places of work continuing to evolve, the launch of Incara further emphasises Legrand's dedication to making workspaces meet the needs of all users. Providing easy and flexible access to power or data sockets, style is at the heart of Incara which presents a vast range of functions and style to suit any interior.

Easy to install, Incara is Legrand's most flexible range of power solutions to date. From flush, in-desk disk-shaped contemporary sockets through to on-desk power and data connections, Incara has been designed to fit within any workplace furniture requirement.

The range offers wireless charging, USB Type-A and C inputs and multiple colour schemes, while it can be designed with a mix of international power sockets if required. Additionally, Incara allows companies the possibility to take control on the presentation of the product, with bespoke branding options available.

Manufactured from high-quality materials, Incara can fit in with the latest trends to meet the most challenging workplace requirements. This is achieved thanks to its configuration with a vast range of Legrand's Arteor™ modules, which ensures a stylish, reliable and versatile solution is supplied.

Paul Martin, Lead Marketing Manager for Legrand UK & Ireland's power distribution ranges, said: "We are always searching for ways to manufacture solutions that meet the modern day needs of post-pandemic ways of working. With Incara, we have created a unique proposition for spaces that have desires for a high-end and flexible power solution. Whether being designed for a modern office, library, university or an airport lounge, Incara provides our most stylish and flexible solution to date."

As with all Legrand products, Incara boasts robust and durable qualities, helping to contribute to a more sustainable world. All packaging is made from recycled materials wherever possible, while Product Environmental Profiles (PEP) are available, providing a reference tool to

measure the environmental impact of the product. Incara is also CE and UKCA marked, ensuring quality and compliance with legislation.

Paul Martin added: “We are confident that Incara not only meets the needs of today’s workers, but it is also futureproofed for ever-evolving technology changes. Our R&D team remain dedicated to manufacturing solutions as sustainably as possible, and with Incara, we have delivered. When you add our renowned customer service commitment to the mix, we are in a unique position to deliver an unrivalled solution to meet the needs of all – whether installers, designers or end users.”

The full range boasts eight products, with multiple variations includes:

- Incara Disq – an attractive, discreet disk-shaped socket, which offers both USB and wireless charging options
- Incara Disq’in – a flush, contemporary socket for desks
- Incara Pop-up – in-desk range with a cover to offer sleek and discreet power and data connections
- Incara Multilink – a modular solution for distributing power and data, that can be flush-mounted in furniture or partitions
- Incara Flip-up – ideal for meeting rooms, sockets fit discreetly under its cover, even with devices plugged in
- Incara Top Access – enables discreet, easy storage for multi-outlet blocks, accommodating chargers and wires
- Incara Link’On – a compact mobile solution which can supply up to six users with power
- Incara Electr’on – a stylish on-desk solution, which allows easy access and unique design opportunities
