

EYOT

The Eyot is our first upholstered product without the use of flame retardants while still complying with UK and American fire regulations. With gained interest for the avoidance of petroleum-based products and flame retardants. We have been testing and researching eco-friendly materials for the past 3 years. Focusing on providing internal sustainable padding for our seating elements. We decided upon using coconut husk, Natural latex and spun British wool.

The Eyot provides an ideal seating solution for lounges, waiting areas, corridors, receptions, and gallery spaces to name a few. The solid timber sections eliminates the need for a separate coffee table; in turn saving on space. Eyot is available in custom lengths and in a large variety of contract grade fabrics.

CODA

We have designed CODA with the perspective of longevity in mind. Making the design easy to repair, flexible and reusable; in turn eliminating future waste. We made a decision to use poplar plywood for its sustainable fast growing, strong but light characteristics, high end 6mm steel jointing systems, solid hardwood timber and a construction grade veneer surface to enhance the circularity of the product.

The simplicity of this product is a part of its great appeal. CODA is light weight in comparison to the other James Burleigh products. This is a result of the high-quality veneers and lightweight internal structure used in the creation of this product. We are pleased to have released a piece of furniture that is both light in weight without compromising the overall quality and durability.
