Bulo, renowned for its dedication to sustainability and cutting-edge designs, is delighted to introduce WoodSaver to the UK market. This milestone launch heralds a momentous occasion, as it sets the stage for a transformative and sustainable future in the UK furniture industry.

WoodSaver is a revolutionary technology that offers a sustainable solution to reduce waste in veneer production. This groundbreaking development will take centre stage during the highly anticipated Clerkenwell Design Week, presented with their UK partner and distributor, Welltek.

WoodSaver has captivated the design world with its ability to combat the significant waste generated during veneer production. Veneer production waste in the furniture industry is a

growing concern, and recent [research](#) has shed light on its impact. Furniture production has a huge global carbon footprint, and we've seen an acceleration in manufacturers actively making an effort to reduce waste and implement more sustainable strategies.

Bulo places huge importance on the circularity of the products they manufacture, as well as considering the reparability of the products so that the life span can be incre

In addition to this, it is vital for the industry to actively work towards implementing more sustainable waste reduction strategies and being mindful of the world's resources. Bulo seeks to revolutionise the industry by implementing WoodSaver technology, paving the way towards a more sustainable future.

WoodSaver utilises an inventive finger-joint technique that reconnects small pieces of veneer, allowing the utilisation of short pieces to produce standard panels. This reduces waste and preserves the intrinsic value of veneer that is typically lost during recycling. With a barely visible finger joint after sanding, WoodSaver offers an unmatched level of craftsmanship and sustainability in veneer production.

*“As a young entrepreneur and the third generation of a family business, I recognise the need to be more economical with resources. Thanks to the WoodSaver technique, we achieve an efficiency gain of approximately 20% on our raw materials. It is our vision to creatively focus more on circularity in the future.”*

*– Louis Busschop, Director.*

Clerkenwell Design Week provides the perfect platform for Bulo to showcase its WoodSaver technology to design enthusiasts, industry professionals, and the media. Attendees will have the opportunity to witness firsthand the incredible craftsmanship and ingenuity of WoodSaver in action.

Bulo, known for its commitment to sustainability and innovative designs, is proud to bring WoodSaver to the UK market. This launch marks a significant milestone in their vision for a more sustainable and circular future in the furniture industry.
