work with**

a new line of hushFree acoustic pods

2024-02-28

Hushoffice presents
a new line of
hushFree acoustic
pods for work and

meetings. Class A acoustic pods compliant with the ISO 23351-1:2020 standard, with a fully refreshed interior, with extremely high technical parameters, will offer the employees even more freedom and flexibility to choose the place and the way of work. All these are available in

the form of three
new products:

hushFree.S,

hushFree.M and

hushFree.L.

Additional solutions
complement the new
line of pods, such as:

hushWall – a

portable office

partition, and

hushSpot – a new

multi-station

hotdesking table.

In the contemporary world, employees returned to the office with a new set of “2.0 needs” and expectations with respect to the hybrid office reality. Today, the workspace must be even more flexible and its layout, equipment and functionalities should support everyday tasks of the employees. As shown by the research, almost 63% of office employees indicated collaboration and social connection as the main reasons to work from office[1]. More than 57% of

employees work from office 1 to 3 days a week[2]. More than 80% of business meetings are held in hybrid form - online and offline[3]. As a result, employees and employers even more than before emphasise the importance of flexible space for formal and informal interactions in the office.

Analysis of
today's needs of
employees have

shown that one of the most desired features of a modern hybrid office space is the freedom to choose the place and the way of work. This flexibility and freedom in creating less

formal space for
work and
meetings
supporting
socialisation
processes and
increasing
effectiveness of
the performance
of tasks are very
important. What
is more,
availability and

freedom of
choice of
professional
acoustic pods for
longer periods of
quiet and calm
work, online and
offline meetings,
as well as long-
lasting phone
calls are a
necessity in the
workspace.

Manager, Hushoffice

Class A acoustic solutions

The new line of hushFree acoustic pods for work and meetings offers solutions meeting the parameters of class A, compliant with the ISO 23351-1:2020 standard for office pods, with a fully refreshed interior – new acoustic panels available in eight timeless colours, extremely efficient ventilation

systems, new 500 lux and 4000 K lighting, and flexible pod configurations – from empty space to any furniture or an option to use additional furnishings designed by Hushoffice. All these are available in the form of three new products: hushFree.S, hushFree.M and hushFree.L.

- **HushFree.S** – it is a pod for working privately, for longer videoconference and for making phone calls for one person. The

pod is equipped with a manually height-adjustable table – this function is easy to use and does not require an additional power supply. It allows work while standing and sitting, which supports wellbeing and health care. In just a few seconds, the employee may adjust the height of the table to the appropriate level taking into account the task performed. Aesthetically designed LED side lighting of the user's face

ensures better visibility
during videoconferences.

- **HushFree.M** – this extremely comfortable acoustic pod offers an ideal space for direct or hybrid meetings, important private conversations, team meetings or creative work. The hushFree.M pod allows extending periods of high efficiency of employees during meetings and conversations or just focusing on work. It can be used for meetings of up to 4 people.

hushFree.M

Employees want inclusive workspace

Ongoing globalisation,

digitalisation and the development of artificial intelligence have changed the economic image of the world, but most of all they have influenced societies around the globe. For modern organisations, this means new challenges and access to completely new employees, both in terms of competences and other features that can bring additional added value to the company. Inclusiveness or, in other words, diversity in the workplace is manifested in the

functioning of employees having different physical, mental and cultural features in the same space. Such workspaces require special solutions supporting teamwork, enabling integration and exchange of experiences, and maximising the effectiveness of tasks while optimising space.

HushWall – a mobile office partition that creates flexible space division and also serves as a vertical workspace, as well as **hushSpot** – a new multi-station hotdesking table equipped with comprehensive accessories fully address these needs.

**In such spaces,
innovations are**

created,
business
develops and
employees feel
that their
proposals, ideas
and opinions are
listened to. The
last three years
have changed
the employees'
and employers'
perception of

office work and redefined their needs. The trend toward inclusiveness and diversity, space for everyone and flexible solutions for maximum efficiency of employees, while meeting their

needs are the
key to create
solutions for the
future.
