Groove... A new era of headboard reading lights from Chelsom

For decades, Chelsom has led the way in designing decorative reading lights for hospitality interiors worldwide, engineered for seamless integration into hotel headboards and cruise ship cabins. Our award-winning design team continues to push boundaries, creating products that are both visually striking and effortlessly functional.

The Groove range includes a refined single-source reading light and a versatile combination wall light offering both task and ambient illumination. Compact, discreet, and beautifully proportioned, Groove reduces the footprint of previous Chelsom designs by 50% while elevating both form and performance.

Its distinctive reeded head introduces a fresh design language, while the angled canopy and newly introduced touch-switch technology deliver a sleek, intuitive user experience.

The combination wall light features a softly diffused main light—ideal as an ambient night light — which is independently switched from the reading light for maximum flexibility. The result is a truly contemporary solution unlike anything else in the integrated reading-light category.

Available in five finishes, Groove brings a tailored aesthetic to any guestroom and sets a new benchmark in this dynamic lighting product category.
