

## **KI expands sit-stand collection with Trim, an innovative new desk designed to make movement at work accessible for all**

This April, [KI](#) has launched Trim, the newest addition to its all-inclusive sit-stand collection. [Trim](#) is an innovatively designed, value-driven desk that supports wellbeing by making movement at work accessible to everyone, all without compromising the trusted quality and service which KI is known for. Its straightforward height-adjustable design focuses on the essential attributes of sit-stand working, while its simple and standardised statement of line provides a clear, reliable solution for value-led environments. Trim delivers wellbeing benefits while complementing the more flexible, design-led sit-stand systems already in the KI portfolio.

Trim has a height range of 624 to 1274mm (including 25mm worksurface), comes in a wide range of widths and depths, and is available as a single desk or back-to-back option. Built-in collision detection, an integrated USB-A charging port in the controller and an open top lower cable tray with a cable chain all come as standard with the desk. Two tone understructure finishes are available on the leg cross beam and lower cable tray on back-to-back workstations. Optional extras include screens, grommets, scalloped edges and an additional drop-down cable tray offering a choice of both practicality and visual appearance.

KI's wider Work2.1 sit-stand collection has been developed through extensive client collaboration to support healthier, more adaptable workplaces, combining ergonomic performance with user-driven design and robust engineering. Designed to accommodate a wide spectrum of environments, from individual workstations to highly specialised technical settings, Work2.1 delivers consistent quality across the collection through shared core attributes including certified safety standards, extensive height adjustability, UK manufacturing and long-term durability. The collection enables organisations to embed movement into everyday working while selecting solutions that align with their operational, aesthetic and technological needs.

The Work2.1 collection consists of three workstations, each providing tailored solutions for different workplace demands. [Work2.1 Core](#) forms the versatile foundation of the collection, offering broad adaptability, comprehensive cable management and scalability for a wide variety of layouts. [Work2.1 Contour](#) introduces a lighter, more design-led aesthetic with a round leg and enhanced mobility options, making it particularly suited to agile and collaborative environments. [Work2.1 High Capacity](#) is engineered for performance in high-demand settings such as control rooms and data-intensive workplaces, with a reinforced structure and advanced cable infrastructure to support complex technology. Together, the three desks provide a spectrum of solutions unified by performance but differentiated by flexibility, mobility and technical capability.

By encouraging regular changes in posture throughout the day, sit-stand desks help reduce the risks associated with prolonged sitting and support healthier, more ergonomic work habits. Encouraging frequent movement with intermittent periods of sitting and standing has been proven to benefit worker wellbeing and productivity, leading many organisations to redesign their workplace strategies. Sit-stand desks are a vital feature of truly agile workspaces.
