advanced acoustic solutions

## **IDEATEC SHOWCASES SPANISH ACOUSTIC EXCELLENCE AT CLERKENWELL DESIGN WEEK**

London, May 2026— The Spanish company Ideatec will present its flagship acoustic solutions at Clerkenwell Design Week, demonstrating how acoustics has become a fundamental element in contemporary architectural design. The company will showcase two of its most innovative products: Ideaperfo Micro 05 and Ideaflo PET, both designed to optimize sound absorption without compromising aesthetics.

Ideaperfo Micro 05, one of Ideatec's flagship products, represents the perfect balance between high acoustic performance and contemporary design. This solution stands out for its ability to integrate seamlessly into any architectural space, offering superior sound absorption while maintaining exceptional aesthetic value. The system provides architects and designers with a versatile tool that transforms acoustic challenges into design opportunities.

Ideaflo PET complements Ideatec's offering with a sustainable and flexible solution made from polyester fiber derived from recycled plastic bottles. This product demonstrates how environmentally conscious materials can meet the highest standards of design and acoustic performance, contributing to healthier and more productive spaces.

The exhibition space at Clerkenwell Design Week has been designed by renowned designer Tomás Alonso, whose creative vision allows visitors to experience firsthand how Ideatec's acoustic solutions integrate into contemporary environments, creating spaces that are both functional and inspiring.

José Tárraga García, CEO of Ideatec, emphasizes that acoustics is no longer just a technical requirement but an essential design element that enhances the quality of life in architectural spaces. The company's philosophy combines innovation, sustainability, and aesthetic excellence to redefine how spaces are perceived and experienced.

With over 35 years of experience and a presence in more than 50 countries, Ideatec continues to lead the industry with high-performance solutions for ceilings, walls, and cladding. Its products, combine technology, sustainability, and innovative design, positioning the company as a reference in the field of architectural acoustics.
