

Fitzroy of London Launches Oxford Doc M Commercial Pack and Previews Digital Configurator at Clerkenwell Design Week 2026

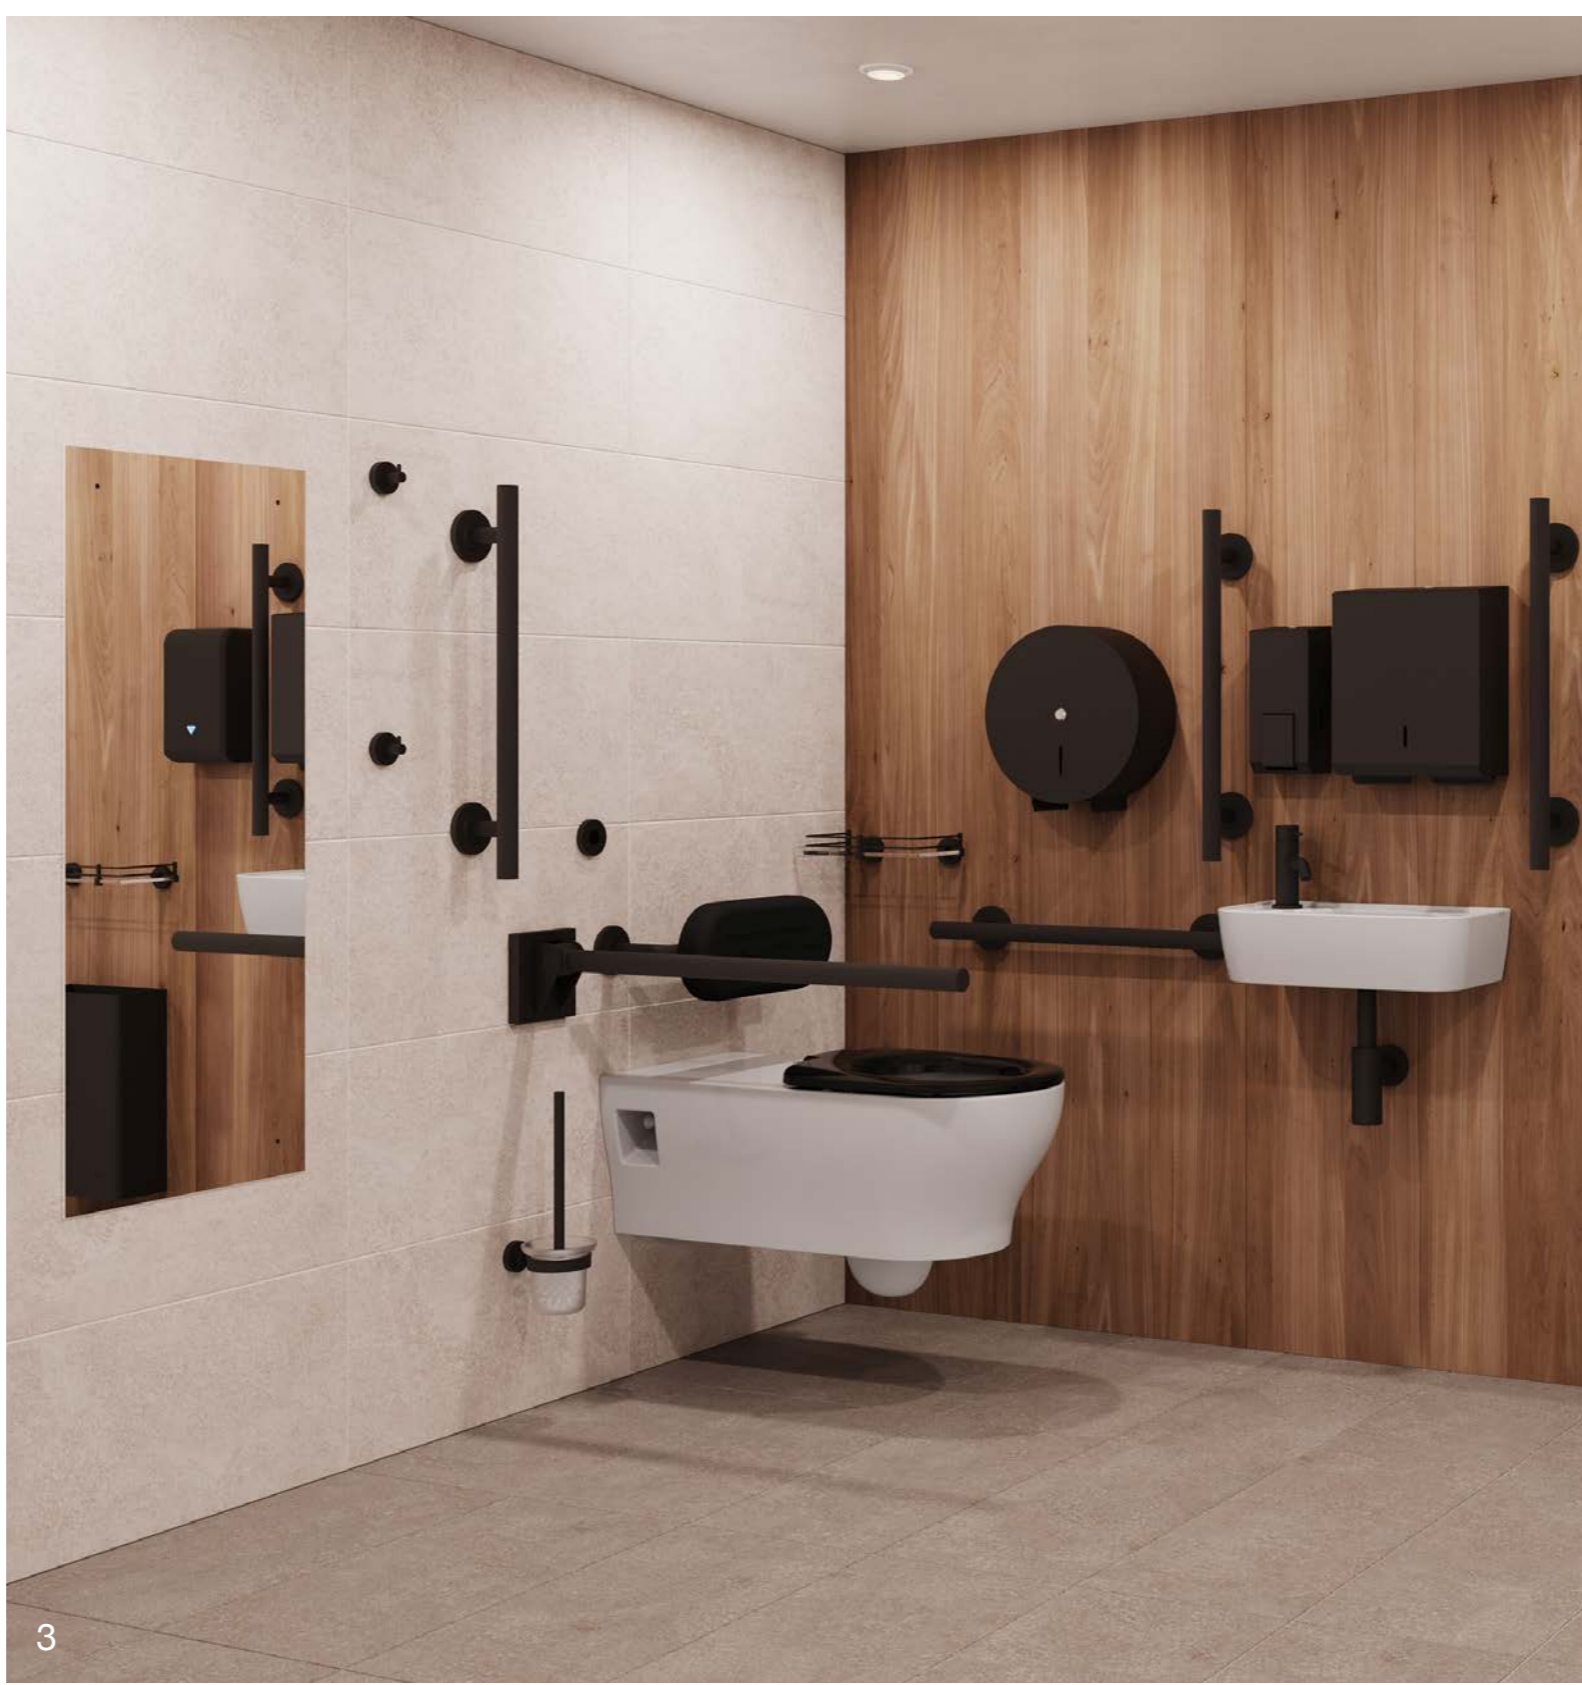

Design-led accessible washrooms specialist, Fitzroy of London, is delighted to be participating at Clerkenwell Design Week, taking place between 19-21 May 2026. The brand will showcase its latest innovation in accessible washroom design, unveiling the new Oxford Doc M Commercial Pack, alongside a preview of its new, upcoming online configurator - a considered approach to inclusive design for commercial washrooms.

Designed to meet UK Building Regulations Doc M requirements, the Oxford Doc M Commercial Pack combines preconsidered, correctly configured components and solutions that streamline specification and installation. All fixing heights, clearances, colour contrast and reach zones all meet DOC M regulations, reducing the risk of noncompliant layouts.

Bringing safe, dignified access to high-use commercial, hospitality, leisure and public environments, products are engineered using quality, robust materials, strengthened mounting points and non-porous surfaces to ensure durability, hygiene and long-term performance. This ensures long-term stability and user confidence in high-traffic and frequently cleaned washrooms, without compromising design intent in the process.

The Oxford Pack is available in five finishes - Satin, Polished, Dark Bronze, Matt Black and Satin Brass - dispensers sit within compliant reach zones and carefully considered backrests, grab rails and accessories are ergonomic and positioned to support comfortable, independent use.

Visitors to Clerkenwell will also enjoy an exclusive preview of Fitzroy of London's new online configurator, launching in June 2026. The digital tool enables users to have full control to design compliant, project-ready Doc M solutions in minutes. This includes configuring precise component combinations, exploring finish options and downloading specification-ready outputs including visual, technical documents, drawings and BIM files. By improving accuracy and reducing design-stage errors, it supports faster, clearer specification, guides component selection, creates real-time visualisation and supports inclusive design across multidisciplinary teams.

Aimed at architects, interior designers, development managers and project managers working across commercial, hospitality and multi-site developments, Fitzroy of London's latest innovations reflect a growing demand for faster, clearer accessible washroom solutions that meet both regulatory and aesthetic requirements.
