Caleo...

...taken from the latin adjective,
being something that causes **warmth!**

So CALEO LTD do exactly that, not only in the warm, snug feeling enjoyed around the fireplace... but also in the sense of wellbeing once the correct design has been produced, and your property features an incredible designer fireplace.

We have a high degree of technical expertise, which is then utilised to design individual solutions, whatever the scope and parameters may be. Trusted by some of the UK's leading architects and interior designers, we are generally able to find the perfect solution for your project.

The products we offer are exclusively sourced from the leading manufacturers and pioneers of specialist fireplace solutions located in France and Belgium. We partner this with the leading flue manufacturer in Europe, and all of these elements all combine to give you the potential to realise the most amazing fireplace solutions.

Caleo bring this together along with inbuilt incredible customer empathy and service and specialist installation services to make the dream fireplace a distinct possibility. We have close technical relationships with our manufacturers, which enables us to understand fully the design and manufacturing parameters available with our proposals.

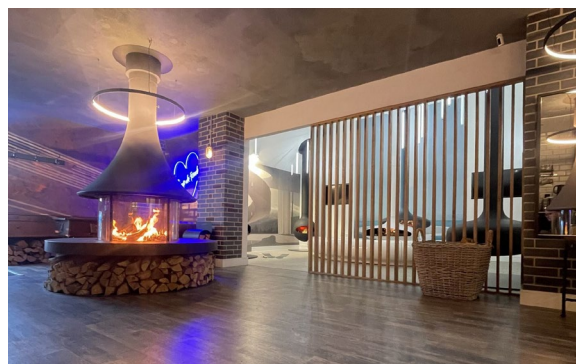

This is vital, when dealing with bespoke, high value projects.

With a wide range of options available, we are absolutely committed to finding the **perfect solution** for your project.

For example...

- High efficiency, low particulate emission wood-burners with **ECODESIGN accreditation** and **DEFRA approval** for use within smoke control areas.
- Room sealed, balanced flue fireplaces designed specifically for low energy and PASSIVE HOUSE projects...(No air vent required). Both **Woodburning** and **Gas Fired** options available.
- Hi-tech **Bio-ethanol** variants, delivering heating, real flames and with **no chimney required**.
- Electric solutions with incredible realistic flame effects, but without significant heat, perfect for public spaces and once again...**no chimney or flue required**.
- Suspended or base mounted fireplaces.
- Wide range of luxury colours and exclusive finishes.

Visit us...in person or online.

Operating from a luxury showroom and offices based just off J30 of the M1, the company showcases 12+ incredible fireplace designs, each one a working model to fully demonstrate the range of styles, finishes and fuel options available.

Although we are based close to Sheffield, in the absolute center of the UK most of our work is undertaken 3-4 hours drive from our offices.

Over the years, we have perfected a seamless and efficient way to make your dream fireplace a reality...wherever you reside.

In the first instance... you are more than welcome to visit us. There are some lovely places nearby to make an 'overnighter' a joy if necessary!

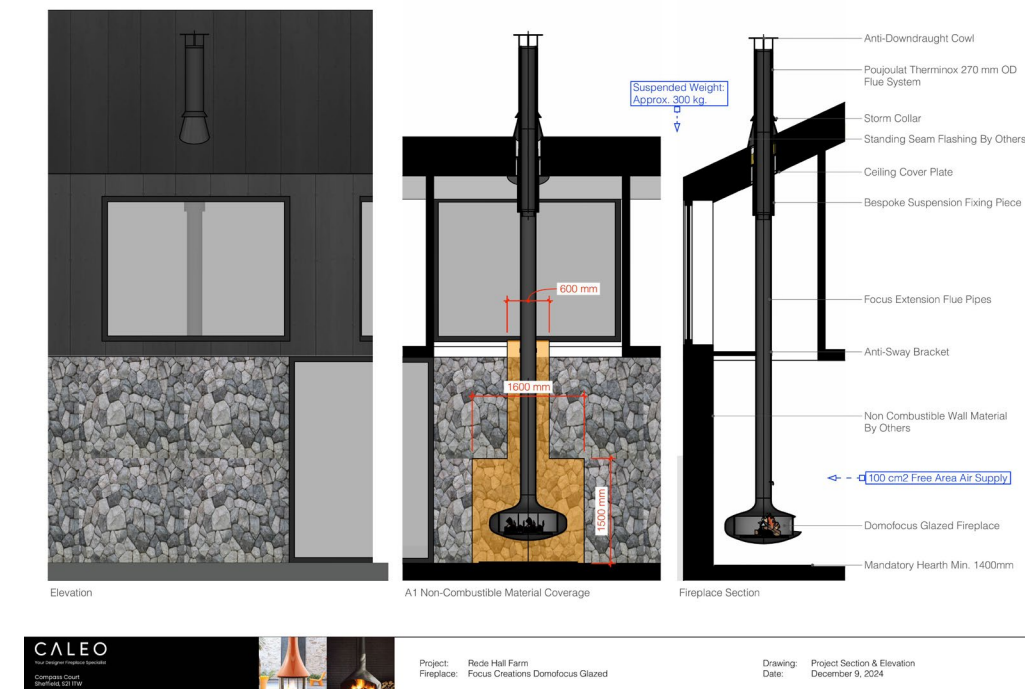

Or, if you just can't make it work with your schedules and availability... lets use technology and you can join us on a private live video call...where we can take you around the showroom, show you the range, the working models and answer all the questions you may have...this is so efficient and always a great experience.

Either method to visit the showroom, can be any day, any time... provided it is by prior arrangement.

Bringing your project to life.

The next stage, you let us have details of your project (drawings/photos are perfect) and we will design your proposal...fully customised for you, and submit this with a full quote to cover all options, technical specification and site preparation requirements.

Once you decide to go ahead, we issue you with full site preparation drawings, so you can contract your own builder/trades to get the site ready...and then we come and visit when the time comes and complete your installation quickly, cleanly and with maximum efficiency.

JC BORDELET

créateur d'harmonie

For decades, JC Bordelet has been synonymous with conscientiousness, innovation, expertise and reliability.

In 1976, Jean Claude Bordelet began to create a 'different' kind of fireplace. By combining avant-garde design and the perfect mastery of metal fabrication, large format fireplaces with beautiful curves and distinctive shapes soon became the hallmark of the name, BORDELET.

This trend continues today within the security of the Seguin group, with a serious commitment to innovation, improving manufacturing processes and performance standards the brand continues to offer genuine one-off creations that belong in the nicest homes and spectacular venues around the world.

Based within a state of the art facility close to Montpellier in the South of France... the artisanal craftsmen, design engineers and support staff create each piece, individually to meet your requirements.

At Caleo, after many years working with Bordelet we fully understand the production processes, any limitations and what the design scope and parameters may be...this knowledge is vital so that we can design, propose and fulfil individual pieces that perfectly meet the clients specification.

The unique Bordelet DNA is the sweeping curves, seamless shapes and fireplaces that provide the opportunity to fully immerse in the 360° experience. Unlike other brands, with a single face and a door...this is a different level of 'WOW', which will be fully appreciated from anywhere in the room. In the event that a central feature doesn't work, we also offer wall mounted and corner variants.

Bordelet offer as standard, a choice of 4 colour shades. In some models, there is also the opportunity to introduce the ultimate in luxury, with a high gloss finish glazed lacquer in almost any colour, or even the exceptional BRUTE finishes make the Bordelet a true, one off masterpiece everytime.

Technical parameters are consistently pushed, with the introduction of new technologies and solutions. Recent evolutions are the glass enclosed, high efficiency ECODESIGN models ensuring futureproof compliance with the most stringent regulations, alongside fireplaces designed from the ground up for low energy and passive house projects...completely room sealed balanced flue both wood fired and gas fired burners.

Aware of future trends, BORDELET have developed alternate fuel options within the fireplace range to include advanced Bio-ethanol burners and even realistic electric effects with benefits of no-heat, which presents great visual solutions for public spaces and high people traffic areas.

JC BORDELET

créateur d'harmonie

The most popular, frequently used designs are as follows:

EVA

This is the flagship model, a large statement piece and a true icon of the brand. We have developed this into many variants, including balanced flue gas fired, electric effect only, log store base and table top mounted to name a few.

LEA

The perfect fireplace for the UK market, and one that carries all the very latest certifications. Only really for woodburning, but can be configured to fit most spaces and whilst the smallest in the range, it still packs a magnificent punch. Available suspended or pedestal mounted.

CALISTA

State of the art...designed from the ground up for PASSIVE HOUSE and low energy projects. A suspended fireplace, perfectly room sealed, and can bring combustion air down inside a special flue system...perfect for airtight requirements.

ZELIA

The elegant, suspended beauty which is always the envy of the neighbours, the attraction for a crowd and the focal point for gathering.

Caleo Ltd Brochure 2025

The range and custom options available to us with BORDELET, ensure that we are always able to offer incredible solutions whatever the brief!

X AXIS

AXIS are part of the same corporate group as BORDELET. A long standing fireplace manufacturer located in the beautiful Auvergne Rhone-Alps region in the South of France, nestled close to the breathtaking snow topped Alps.

Producing high performance wood burning fireplaces and stoves for many years, we bring to you the incredible A-1000 series.

Large format woodburning, freestanding stoves, double or single sided and with the latest accreditation and ECODESIGN certifications.

A range of bench bases and log storage accessories give spectacular heating capabilities with controlled and efficient centrepieces that fit with the Caleo DNA. Double combustion for low particulate emissions, practical and effective air wash to keep the viewing glass clear and of course, precise and responsive air controls to give user comfort whatever the requirements.

In 1968, Dominique Imbert created history, by creating the GYROFOCUS. A true iconic, steel fireplace sculpture which still holds place today in the dreams and aspirations of many, and takes pride of place in the most fortunate, incredible and inspirational homes and locations around the world.

Based in the South of France, and with an enviable reputation the world around, FOCUS have a DNA underpinned with creative design, performance solutions all presented within the enviable, award winning range of fireplaces. Each one hand crafted by skilled craftsmen, created and finished with love to the exacting standards and precision both expected and demanded with the FOCUS brand.

As out and out specialists in the field of central, suspended and designer fireplaces we enjoy dynamic relations with the technical design team at FOCUS, and understand fully the scope in which they can operate and produce. This ensures a seamless process, to cover the design, supply and fulfilment of every FOCUS project.

The FOCUS range has evolved over the years, and now features similarly spectacular, unique and beautiful fireplaces with rotation function, made to measure options and always a high performance and very high finish standard.

Incredible and pioneering design ensures future proof appeal, and always brings a sense of satisfaction around the warming and inspiring centre pieces.

In an ever changing and environmental conscious world, FOCUS continue to create within new parameters and with new technologies.

Having developed an extensive R&D team, with far reaching expertise has ensured that FOCUS remain at the forefront of technology and new legislations with a continuous stream of new product developments and variants. Recent years environmental and ecological pressures have seen a necessity to consider alternative fuels, such as bio-ethanol and electric.

So recent additions include a range of high-tech, high performance bioethanol solutions alongside the incredible visual delights of the HOLOGRAPHIK electric models. Neither options requiring a flue or roof penetration.

Existing woodburning and gas-fired models have been further developed, to include suspended and rotating gas options, high efficiency glazed woodburners meeting all the latest ECODESIGN and clean burn DEFRA standards.

Whatever the brief, whatever the condition, we can find a FOCUS configuration to satisfy.

Key models within the Focus range:

GYROFOCUS

The iconic design...ask anyone to describe a floating fireplace and this is what they would describe. Available with glazed frontage low particulate woodburning, DEFRA approved for smoke control areas, Bio-ethanol variants, and floating gas fired option.

DOMOFOCUS

Slightly smaller than the GYRO, more curvaceous and the full range of options and opportunities.

ERGOFOCUS

Large opening into the fireplace chamber, great flame view. Electric, Bio-ethanol, Woodburning and Gas fired variants.

SLIMFOCUS

Tiny footprint, big statement fireplace. Balanced flue wood or gas fired, perfect for PASSIVE HOUSE and low energy projects. DEFRA approved for smoke control areas.

metalfire

Incredible architectural fireplaces from the prestigious Belgian manufacturer. Craftsmanship is the fundamental value for **Metalfire** producing absolutely design led solutions with a range of standard high performance woodfired, gas fired and bio-ethanol solutions matched with an infinite number of custom design possibilities.

Made to measure services, when the project demands the personal signature of the Architect, Interior designer or client...these are masterpieces in the making!

Open fireplaces are possible, wood and gas...configured with systems to control air flows into the appliance, and through the chimney system. With the design and manufacturing capabilities at our disposal, there is no reason why your fireplace dream cannot become a reality...whatever the fuel, whatever the visual...let's create it!
