

DISPERSIVE / EMULSION PAINTS

SMOOTH SURFACES

PAINTING

Paint type: Dispersive/Emulsion paints

Surface type: Smooth surfaces

Purpose: Painting

Fiber: 100% Polyacrylic

Fiber length: 16mm

Paint roller length: 25cm

Quality level: Standard

Standard-quality paint roller crafted using 100% polyacrylic fabric ensures great painting results. Pile height is 16 mm, which enables great absorption and high coverage power for high-efficiency work on various smooth surfaces. The thermofusion production process ensures great durability, reliability, and resistance to solvents. This paint roller is a perfect tool for DIY projects and home renovations where covering large areas with basic dispersive paint or emulsion is needed.

DISPERSIVE / EMULSION PAINTS

SMOOTH SURFACES

PAINTING

Paint type: Dispersive/Emulsion paints

Surface type: Smooth surfaces

Purpose: Painting

Fiber: 100% Polyamide

Fiber length: 12mm

Paint roller length: 25cm

Quality level: Expert

Expert-quality paint roller crafted using a special Melange fabric weaving technique, which elevates the absorption and release properties while also reducing splatter risk. The pile tops are generously flowered, which enables superior paint pick-up and highly efficient paint coverage with dispersive/emulsion paints on various smooth surfaces. Not only does this paint roller make the job easier, it also ensures that the end results are professional and elegant.

DISPERSIVE / EMULSION PAINTS

SEMI-ROUGH SURFACES

PAINTING

Paint type: Dispersive/Emulsion paints

Surface type: Semi-rough surfaces

Purpose: Painting

Fiber: 100% Polyamide

Fiber length: 18mm

Paint roller length: 25cm

Quality level: Expert

Expert-quality paint roller specially developed for professional application of dispersive/emulsion paints on semi-rough surfaces. This roller is crafted with the highest-quality 100% polyamide fabric. Pile height is 18 mm, and the weaving technique is "Endless," providing a zero lint guarantee. Together, the specs of this roller ensure extreme absorption and coverage efficiency, as well as high durability and a long useful life.

FACADE COATINGS

ROUGH / FACADE SURFACES

PAINTING

Paint type: Facade coatings

Surface type: Rough/ facade surfaces

Purpose: Painting

Fiber: 100% Polyamide

Fiber length: 20mm

Paint roller length: 25cm

Quality level: Expert

Expert-quality paint roller specially developed for professional application of dispersive/emulsion paints on rough exterior walls. This roller is crafted with 100% high-quality polyamide fabric with intricately flowered pile tops. The specs of this paint roller ensure supreme absorption and efficiency in coverage, with the power to consistently deliver paint in every wall texture. The polyamide fabric ensures great durability and low wear in contact with rough surfaces, making this roller a great tool for long projects.

ACRYLIC PAINTS

SMOOTH SURFACES

FINISH

Paint type: Acrylic base paints

Surface type: Smooth surfaces

Purpose: Finish

Fiber: 100% Microfiber

Fiber length: 9mm

Paint roller length: 25cm

Quality level: Standard

Standard-quality paint roller that presents an excellent choice for efficient and precise application of acrylic-based paints on various smooth surfaces. The roller is crafted with 100% microfiber fabric with a 9mm pile height that ensures good paint absorption and consistent release on the surface. This paint roller was specially developed for applying acrylic-based coatings, and its properties ensure a high-quality, smooth finish on various types of smooth surfaces.

SMOOTH SURFACES

FINISH

Paint type: Acrylic base paints

Surface type: Smooth surfaces

Purpose: Finish

Fiber: 100% Microfiber

Fiber length: 10mm

Paint roller length: 25cm

Quality level: Expert

Expert-quality paint roller specially developed for the perfect application of high-quality acrylic-based paints with very smooth, professional finishing. The roller is crafted with 100% microfiber woven fabric with 10mm pile height, which ensures smoothness in application without marks or tuff. The special woven microfibers allow for very high absorption and generous release properties with great consistency in strokes, thus reducing dip and roll time in projects. which ensures good painting efficiency and easy handling.
