

How we can help Construction businesses

- 1 We understand that construction, demolition, and excavation sites all generate various types of waste and can provide you with **flexible** services to cover the varied nature of your waste
- 2 We understand the complexities of construction businesses, such as managing **asbestos removal**
- 3 We can offer reliable waste service often multiple times per week or day and **ad hoc** services as your sites demand
- 4 A nationwide network of construction and demolition sorting and recycling and facilities ensures as much material as possible avoids landfill, **saving** landfill taxes for our customers
- 5 Whatever your budget, Biffa can design a solution to fit, offering **great value** for money
- 6 We offer **free waste audits** to help customers identify opportunities to recycle more and reduce costs
- 7 Our **local teams** are on hand to address any issues or concerns, and provide extra help where needed
- 8 We offer **support** on changing waste legislation to guide businesses and organisations through their obligations and avoid fines or penalties

We're going for green

Sustainability is at the forefront of all our decisions, so when it comes to waste, not wasting it is our top priority. We recycle all the things you'd expect and some you wouldn't. And by supporting the development of more infrastructure and expanding our facilities, we can pulp paper, shred aluminium, and help you to manage even more of your waste sustainably.

Why choose Biffa?

- **Handy online management**
Take control of your recycling and waste by managing your account online.
- **Scale and reach**
We operate all over the UK with 95% postcode coverage, so we can manage your waste locally across multiple locations.
- **Compliant with legal and environmental legislation**
As a responsible waste management provider we're dedicated to taking care of your waste in a compliant way.

Rethinking Waste

The Construction Sector

Biffa

We can help you waste less and save more

The benefits of proper construction waste management include:

Compliance

Businesses are legally responsible for their waste, even after it has left the property. Biffa can help guide you on relevant regulation changes and give you peace of mind that your commercial waste is being disposed of responsibly.

Health and safety

Correct waste handling and segregation will reduce risks to employees and the public from materials left in inappropriate places.

Reduced costs

Landfill tax is currently £91.35/tonne and due to rise again next year. With construction materials weighing a significant amount it pays to be environmentally consciences. Having an experienced waste management provider will help you avoid unnecessary disposal costs.

Improved reputation

Businesses that demonstrate consideration for the environment will develop a positive reputation, improving their relationships with customers and clients.

Biffa understands the need for effective waste management solution for your construction business.

No matter the size of your business or its location, Biffa can help you minimise your waste and protect your company's environmental credentials. Alongside our standard general waste and recycling services, we provide:

- A range of fast turnaround skips and bulkers for construction waste
- Temporary skips
- Asbestos removal
- Tanker services

Speak to a Biffa expert to find out how we can support you.

Plastic? Glass? Food? Cardboard? We recycle it all.

Did you know the latest statistics from Defra show the UKs construction, demolition, and excavation industries produce 61% of all waste.

General Waste

General waste collection services take care of all non-recyclable commercial waste. We work with you to tailor your commercial rubbish collection to the individual needs of your company rather than just applying a "one-size-fits-all" solution.

General waste doesn't mean landfill. We try and avoid this as much as possible by using solutions such as Energy from Waste and Refuse Derived Fuel where possible.

Dry Mixed Recycling

Ideal for customers looking for a simple and efficient way to improve their company's recycling performance, achieve environmental compliance and control costs.

DMR allows you to put most of your everyday waste such as; cans, paper, cardboard, plastic bottles, films and hard plastics into one single bin without the need to segregate. All sorted materials are sent to approved reprocessors for recycling into new products.

Hazardous

Hazardous Waste Transfer Stations and treatment sites across the UK. Here they're filtered, washed and treated quickly, safely, and efficiently.

Secure

Biffa can securely destroy a range of different waste products in a way that ensures we recycle and recover as much as possible. This reduces what might otherwise have gone to landfill.
