

ENHANCE YOUR CMMS CAPABILITIES WITH AN EDMS INTEGRATION

The world of maintenance and reliability (M&R) has evolved rapidly over the past few years, with remote capabilities, comprehensive data, and effective preventive and predictive maintenance scheduling becoming more critical than ever before. Yet, many organisations still struggle to find tools and technologies that work intuitively for their teams, integrate with their current systems, and provide the comprehensive, easy-to-find insight they need to achieve operational excellence.

That's why we created this EDMS/CMMS cloud integration. This new integrated solution provides Maintenance Connection users with the power of the Meridian engineering document management system directly in their Maintenance Connection instance.

Eliminate siloes between departments by consolidating engineering, project, and operational information in one centralised platform.

Simplify access to documents and drawings needed to execute preventive maintenance or initiate engineering reviews in order to optimise operations.

Lessen the risk of safety concerns and improve regulatory compliance with up-to-date, controlled documentation.

Create an integrated environment to streamline M&R modernisation and enable effective digital transformation.

THE POWER OF COMPREHENSIVE PLANT AND FACILITY DATA

By combining the power of a CMMS and engineering document management system (EDMS) in one single user interface, you can facilitate seamless collaboration within teams and between departments while offering instant access to the most up-to-date plant and facility data. Additionally:

IMPROVE ASSET MANAGEMENT AND OPERATIONS

Help every department in your business -- including engineering, maintenance & operations, capital projects, and IT – to:

- Increase productivity
- Reduce errors
- Improve collaboration
- Centralise crucial engineering and maintenance information

MAXIMISE PROCESS EFFICIENCY

Controlled documentation is difficult to manage as it's unstructured, spread across systems, and difficult to trust due to constant change. What's more, maintenance teams and plant managers often struggle to access the technical manuals, CAD drawings, or project files they need to complete a given task. Connecting to a robust EDMS simplifies document management over the entire asset information lifecycle, allowing users to:

- Track parallel changes
- Streamline concurrent engineering
- Keep your engineering and maintenance projects under control
- Maintain compliance while ensuring data quality and integrity

ENABLE MODERN OPERATIONS

Effective digital transformation and implementation of IoT and IIoT technologies is all about having the right functionalities and truly integrated systems. Connecting a CMMS and EDMS makes it easy to share and collaborate in real time on the latest document versions with internal teams and external EPCs. This ultimately helps truly modernise and optimise both engineering and maintenance operations.

INCREASE TEAM SAFETY AND SATISFACTION

Accruent's EDMS lessens the risk of safety and compliance concerns for technicians and plants. This is because:

- Documents are continuously updated so users are always working with the latest, most accurate information
- Meridian provides instant access to up-to-date technical documentation
- Meridian supports the entire enterprise for improvements across sites and departments
