

12d[®]

World Leading Software for Construction, Surveying, Civil and Water Engineering

Software designed and developed by your peers

From precise data collection to advanced design capabilities and efficient information management, 12d is a scalable solution that delivers quick and high-quality production that meets the needs of all project stakeholders.

Surveyors

Collect and manage large data sets on projects for real-time collaboration and decision-making.

Designers

From version control to real-time updates, empower your team to work together seamlessly.

Water Engineers

Strong analysis and detailed 3D models to unlock better design decisions and project outcomes.

BIM & Digital Engineering Managers

Break down data silos and uphold standards by centralising all project information within an ISO 19650 Common Data Environment.

Trusted by the best in the industry to help deliver successful projects every day

12d[®] Synergy

12d Synergy is the leading ISO 19650 compliant Common Data Environment for the Built Environment Industry.

12d[®] Model

12d Model is powerful, world leading software for surveying, civil and water engineering.

12d[®] Field

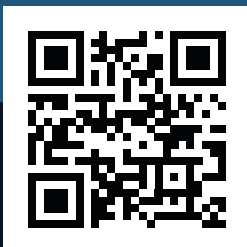

12d Field is developed to enable surveyors and engineers to use both GNSS and Total Stations with the same software that is used in the office to design and finalise projects.

12d Synergy has been great for the NorthConnex project, honestly, it's been a God-send for the security of our data and information. In surveying circles, security of information is absolutely paramount. 12d Synergy is also scalable, reliable, and flexible. So, it's definitely been a great initiative to have onboard."

David Mares

Bouygues Construction Australia Survey Manager
