

## Haloguard 360

### Forklift and plant collision avoidance technology

Haloguard 360 available from Stanley, is a collision avoidance and accident prevention system that creates safer working environments where forklift trucks, plant machinery and cranes operate in proximity to workers.

The HaloGuard 360 Artificial Intelligence (AI) safety system includes bilateral collision avoidance and accident prevention. Using Ultra-Wideband (UWB) beacon technology, industrial vehicle location can be monitored in real-time within centimetres. Drivers are alerted to a worker's presence via tablet-like display.

Workers on the floor receive haptic proximity alerts from the wearable device, informing them of the presence of a forklift or other industrial powered vehicles including crane loads overhead. Operators receive a customisable visual and audio alert.

Stanley's approach ensures that our clients know exactly where the risks are, measure them accurately, identify new risks as they emerge, and deploy targeted solutions.

Additional receivers can be strategically positioned throughout your facility to provide real-time communication that enables 360-degree coverage with uninterrupted protection.

## Benefits

- > Improve worker safety
- > Receive haptic and visual alerts of nearby hazards
- > Bilateral warning alerts for operators and workers
- > Pinpoint current or potential risks within centimetre precision
- > Collect data on incidents, near-misses, and operator behaviour
- > Turnkey solution that is easy to deploy
- > No need to rely on Wi-Fi connectivity
- > A comprehensive dashboard showing real time data
- > Data provides a comprehensive understanding of asset utilisation
- > Colleagues engaged in health & safety training
- > Fast assessment reporting for real time insights
- > Fully customisable solution for your business

# Haloguard 360 technology is used across all industries, including:

- > Warehouse and Logistics
- > Construction
- > Manufacturing
- > Healthcare
- > Retail and Grocery
- > Automotive

- ✔ Free initial consultation
- ✔ National support coverage

- ✔ Full training provided
- ✔ Trials available
