

Construction ERP Software

Offsite, Modular & Construction Engineering businesses

Xpedeon provides a complete suite of integrated business tools delivering Digital Transformation across your business to help drive efficiency, enhance productivity and boost profitability.

It is a highly scalable and flexible enterprise-wide solution that enables the implementation of operational and financial controls, provides real time access to critical information, and eliminates manual work and countless spreadsheets. Xpedeon is a fully integrated ERP solution encompassing security, approvals and process workflows, clearly delivering crucial management information where it is needed.

"Xpedeon has helped us achieve total digital transformation across our entire business. We now have a single integrated system and are agile, efficient and responsive."

David Bentley, Commercial Director, JN Bentley Limited

Secure & Stable

Xpedeon's Software-as-a-Service platform is built on world-class infrastructure provided by the Google Cloud Platform (GCP), to deliver consistent and secure performance and up-time.

Our software is backed by ISO 27001, ISO 27701, ISO 27017, and ISO 27018 certifications.

HR & Employee Portal

Supply Chain Portal

Benefits

- **Offsite specific workflows:** Addresses the specific challenges of Offsite manufacturing projects, spanning: inventory, manufacturing, delivery for onsite assembly, installation, testing and commissioning.
- **End-to-End Integration:** Xpedeon covers all aspects of offsite manufacturing, from project initiation through to manufacturing and project delivery.
- **Cost Control & Budgeting:** Gain real-time visibility into project costs and enhance your profitability with built-in cost control tools and reporting.
- **Project Collaboration:** Xpedeon facilitates better communication and collaboration across your Sites, Offices, teams, and supply chain with an intuitive, cloud-based system.
- **Onsite and Offsite:** A unified ERP system that controls both onsite and offsite activities within a project.

CRM & Sales Progression

- Track contacts and follow up on activities, communications, offers and negotiations.
- Seamlessly convert opportunities to reservations with integrated contact information.
- Manage and track order progress throughout the construction process.
- Intuitive workflows for communication and issue resolution.
- Manage sales through broker and partner networks.
- Streamline customer invoicing for construction-based payment plans.
- Manage and standardise buyer's options, extras, combinations, and prices.

Procurement & Inventory

- Streamline the (site) material requisition process.
- Issue enquiries, compare quotes, and place PO's using the Procurement Workbench.
- Manage trading agreements and bulk, rate-only and call-off orders to fulfil project requisitions.
- Manage goods receipts, deliveries and inventory control functions and track supplier KPIs.
- Electronic signature approvals (DocuSign).
- Improve accuracy and with automated invoice field recognition and Smart Matching technology.

Manufacturing

- Manage and track productivity at process level to optimise manufacturing efficiency.
- Track actual cost against budget at product level.
- Develop production Bills of Material incrementally as engineering designs become available.
- Plan production activity with complete visibility of project delivery schedules and milestones.
- Integrate Project Billing, Inventory and Financials: 360% reporting and control.

HR, Payroll and Employee Timesheets

- Manage attendance and payroll, including taxation, fully compliant with statutory employment legislation.
- Configure timesheets with integration with Projects, Manufacturing, HR and Payroll. Support for multiple entry modes: projects, people, & machine operators.
- Automated allocation of costs to projects based on timesheet data and support for hire-charging labour for accurate job costing.
- Xpedeon Employee Self Service Portal empowers employees to access their records and communicate digitally with the HR and Payroll teams.

Financial Accounting

- Integrate Financial Accounts with the core business functions to ensure a seamless transition of data from project to corporate accounts.
- Effectively manage multi-company and multi-currency scenarios.
- Manage accounts payable and receivables with end-to-end visibility and integration with order-to-cash and procure-to-pay.
- Electronic invoice recognition and processing with smart matching and exception resolution workflows.
- Comprehensive support for project accounting and reporting on project profitability and WIP.
- Multi-jurisdiction taxation compliance - VAT/MTD/-CIS/GST.

Budgeting and Cost & Value Reconciliation

- Manage and track budgets, the impact of scope change, and variations.
- Early and transparent visibility of project cost-to-date and cost-at-completion analysis.
- System-wide integration providing real-time data analysis for margin at completion.
- Generate forecasts linked to project plans and evaluate project cashflow.
- View summarised and detailed level information of commitment and accrued cost information with drilldowns to the last detail.

Plant and Equipment

- End-to-end management of plant inventory, deployment and utilisation at project sites, with clear visibility of operating costs and production KPIs.
- Manage planned and reactive plant maintenance and repairs, including the inventory of spares and consumables.
- Charge plant deployed to projects, to generate accurate job costs.
- Manage plant hire from external suppliers, on/off-hiring and hire charge invoice processing.
