

PART OF

Food Drink & Hospitality Week

5 - 7 April 2027 | ExCel London

ARTIFICIAL PLANTS

- Artificial flowers and plants are highly flammable and give off toxic fumes.
 - There are strict regulations governing the materials used in the construction and decoration of stands and in the demonstration of products.
- **All stands featuring artificial plants will be inspected during the Build-Up period and will be subject to a Burn Test.** If the plants catch fire or fail to meet fire safety regulations, the Organisers reserve the right to remove the non-compliant materials or, if necessary, close the stand.
- All decorative materials used for stand dressing must be purchased pre-treated with the appropriate fire-retardant chemicals. Any artificial flowers or plants must be manufactured to be fire-retardant from the outset.
- Silk-type flowers are acceptable, providing they are fireproof or have been treated and marked as such.
